Ground The Instrument

To avoid electric shock hazard, the instrument chassis and cabinet must be connected to a safety earth ground by the supplied power cable with earth blade.

DO NOT Operate In An Explosive Atmosphere

Do not operate the instrument in the presence of flammable gasses or fumes. Operation of any electrical instrument in such an environment constitutes a definite safety hazard.

Keep Away From Live Circuits

Operating personnel must not remove instrument covers. Component replacement and internal adjustments must be made by qualified maintenance personnel. Do not replace components with the power cable connected. Under certain conditions, dangerous voltages may exist even with the power cable removed. To avoid injuries, always disconnect power and discharge circuits before touching them.

DO NOT Service Or Adjust Alone

Do not attempt internal service or adjustment unless another person, capable of rendering first aid and resuscitation, is present.

DO NOT Substitute Parts Or Modify Instrument

TABLE OF CONTENTS

CHAPTER 1

PERFORMANCE TESTS

1-1. INTRODUCTION

This chapter provides the test procedures to verify that the HP 4285A meets the specifications listed in the HP 4285A Operation Manual. All tests can be performed without accessing the interior of the instrument. Performance tests are used to perform incoming inspection and to verify that the HP 4285A is within its performance specifications after troubleshooting or adjustment have been performed. If the performance tests indicate that the HP 4285A is not within specifications, check your test setup, then proceed to Adjustments or Troubleshooting as required.

NOTE

Allow the HP 4285A to warm up for a minimum of 30 minutes before starting any of the performance tests.

NOTE

The performance tests are valid only when performed in an ambient temperature of 23 °C ±5 °C.

1-2. TEST EQUIPMENT

Tables 1-1 and 1-2 list the test equipment required to perform the tests described in this chapter. Use only calibrated test instruments when performance testing the HP 4285A. If the recommended test equipment is not available, equipment with specifications equal to or surpassing those of the recommended equipment may be used.

NOTE

Components used as standards must be (1) calibrated using an instrument whose specifications are traceable to the National Institute of Standards and Technology (NIST) or an equivalent standards group, or (2) calibrated directly by an authorized calibration organization, such as NIST. The calibration cycle depends on the stability specification of each component.

NOTE

The HP 4285A Performance Test Program can be used for shortening the test time and to avoid human error. The HP Part Number for the program is as follows.

APPENDIX A

MANUAL CHANGES

A-1.INTRODUCTION

This appendix contains the information required to adapt this manual to earlier versions or configurations of the HP 4285A than the current printing date of this manual. The information in this manual applies directly to HP 4285A Precision LCR Meters whose serial number prefix is listed on the title page of this manual.

A-2. MANUAL CHANGES

To adapt this manual to your HP 4285A, refer to Tables A and B, and make all of the manual changes listed opposite your instrument's serial number and ROM-based firmware's version.

Instruments manufactured after the printing of this manual may be different than those documented in this manual. Later instrument versions will be documented in a manual changes supplement that will accompany the manual shipped with that instrument. If your instrument serial number is not listed on the title page of this manual or in Table A, it may be documented in a **yellow MANUAL CHANGES** supplement.

Refer to the description of the ***IDN?** command in **CHAPTER 9, COMMAND REFERENCE, OPERATION MANUAL** for confirmation of the ROM-based firmware's version.

Table A. Manual Changes by Serial Number
