Description

The E8408A, Agilent's **4-slot C-size VXI mainframe**, is priced well below other Agilent VXI C-size mainframes. Its low price brings down the cost of test, especially when combined with Agilent's multi-function VXI M-Modules and data acquisition modules.

The E8408A is Agilent's smallest and lightest-weight C-size mainframe. Its small size saves system rack space. Small size and light weight make the E8408A transportable and suitable for many data acquisition and field service applications.

The E8408A offers mainframe monitoring, quiet efficient cooling, and 175 watts of usable power. Front panel monitor lights give up-to-the-moment indication that power supply and fan are operating and that the internal temperature is OK. A two-speed fan provides quiet, powerful cooling.

Refer to the Agilent Technologies Website for instrument driver availability and downloading instructions, as well as for recent product updates, if applicable.

175 Watts Usable Power

The E8408A provides 175 watts usable power. This is adequate to power the vast majority of Agilent VXI modules.

Superior Cooling

The E8408A's innovative mechanical design provides extremely quiet and efficient cooling for the power supply and modules. Carefully engineered airflow provides excellent cooling with minimum acoustic noise.

A two-speed cooling fan provides reliable cooling of the power supply and modules. The fan operates in either Variable (automatically controlled) or Full Speed mode. A two-position switch on the mainframe's front panel controls the speed mode. Full Speed mode is recommended for maximum cooling when acoustic noise is not a big concern. In Variable Speed mode, the fan speed is controlled automatically as a function of temperature rise in the mainframe and ambient temperature. Variable Speed mode allows the quietest operation while providing sufficient power supply and module cooling.

Airflow enters the mainframe rear panel, flows through the power supply, fan and modules and exhausts out the left side (as viewed from the front with the E8408A in horizontal position). This allows mainframes to be stacked or rack-mounted directly on top of one another.

At-a-Glance Confidence in Operation

The E8408A front panel indicator lights give up-to-the-moment visual indication that power supply voltages are operational, the power supply temperature is within limits, and the fan is operational.

Improved, Highly Reliable Backplane Design

The backplane features solid state automatic daisy-chain jumpering for the VMEbus grant and interrupt acknowledge lines, eliminating the need for hand selection of switch settings. Full differential distribution of the CLK10 signal is provided on the backplane. This minimizes jitter and skew, providing a clean timing source for VXI instrument modules. The surface mount backplane improves both reliability and stripline signal performance.

Agilent generates SYSRESET and ACFAIL on the backplane. This is necessary for full compliance with the VXI Specification, but is not generally implemented by other manufacturers.

Easy Maintenance Power Supply

Convenient access to the power supply and cooling fan is provided through the mainframe's rear panel. A replacement power supply and fan can be installed without removing the mainframe from your rack. The power supply's plug-in design makes replacement easy.

Accessories and Configurations

Backplane Connector Shields Kit

The E8408A Opt 918 improves ground connections between VXI modules and the E8408A backplane. A few Agilent VXI modules require these shields to comply with EMC EN55011 and CISPR11. (The vast majority of Agilent VXI modules do not require these shields.) Note that the shields are only useful if VXI modules include contacts that conform to VXI Spec. B.7.2.3.

Rack Mount/Cable Route Kit

The E8397A Rack Mount Adapter Kit allows the E8408A to be flush-mounted or recess-mounted up to 8 inches in one-inch increments. In addition, the rack mount kit includes a 1.125-inch-wide cable route on the mainframe's right side, plus stick-on labels for use when the mainframe is mounted in a horizontal position. To mount the E8408A in Agilent rack cabinets, order the E8397A Rack Mount Cable Route Adapter Kit and either the E3663AC Support Rail Kit or 1494-0413 Rack Slide Kit. The 1494-0413 Rack Slide Kit can be mounted in non-Agilent rack cabinets using 1494-0061 End Brackets.

EMC Filler Panel (1-slot wide)

The Agilent E8400-60202 filler panel (1-slot wide) provides continuous EMC connection across the mainframe front opening. This helps reduce radiated emissions and increases ESD immunity. All Agilent VXI modules include EMC contacts to adjacent slots.

VXI Slot Filler Panel (1-slot wide)

The E8400-44305 VXI Slot Filler Panel is 1-slot wide and is used to cover unused slots, providing a smooth appearance and preventing access. In addition to the cosmetic and safety value, the slot filler panel suppresses acoustic noise and improves airflow. The E8400-44305 does not include EMC contacts.

Air Flow Restrictor (1-slot)

The one-slot E8400-80917 Air Flow Restrictor blocks airflow in one empty slot.

Intermodule Chassis Shield Kit (1-slot wide)

The E8400-80919 Chassis Shield Kit (1-slot wide) provides additional shielding between noisy modules. These shields are relatively easy to install.

Documentation

Mainframe documentation consists of a User/Service Manual which describes electrical and mechanical aspects of the mainframe and accessories. The manual is included on Agilent's Universal Instrument Drivers CD-ROM supplied with the mainframe and is also available on Agilent's Website. A printed copy of the manual is also included.

Warranty

Agilent Technologies provides a standard 3-year return-to-Agilent warranty on this mainframe. E8408A Opt. W01 converts the standard warranty to 1-year On-Site.
