

METRA HIT 28S and 29S

Precision Digital Multimeters, Power Meters

3-348-866-03

11/9.06

METRA HIT 28S and 29S

- 300,000 digits and triple display
- Precision multimeter (V, dB, A, Ω , F, Hz, F, °C/°F, V $\rightarrow$ +))
- Direct current measurement (to 10 A) or via (clip-on) current transformer: A transformation ratio of 1000:1 or 10,000:1 is accounted for by the display
- Quartz movement for Min-Max recording relative to real-time
- AUTO SELECT
Automatic recognition of measured quantities (V, Ω and F)
- Connector jack for external power pack

METRA HIT 29S

- Power and energy measurement (W, VAr, VA, Wh, VArh, PF) with analog signals or pulse-type energy measurement, display of momentary measured values, mean values and peak power values
- Power disturbance recording
- Large measurement data memory for up to 60,000 measured values

CAT IV

Quality Management System

DQS Certified per
DIN EN ISO 9001 reg. no. 1262

DKD Calibration
Certificate

Applications

METRA HIT 28S and 29S multimeters are high performance precision instruments for laboratory use, as well as for service and training. With a display range of 300,000 digits, as well as outstanding accuracy and long-term stability, they fulfill all requirements for use in calibration and R&D laboratories. The instruments can be utilized on-site for precision maintenance and calibration tasks thanks to battery operation.

Features

Convenient Triple Display

The momentary measured value and up to two additional values are displayed simultaneously, for example:

- Momentary, minimum and maximum measured values
- Frequency and RMS value of AC measuring voltage

Or for power measurement with METRA HIT 29S:

- Momentary measured values as well as active power, voltage and current
- Maximum value for periodic power with date and time

High Resolution and Precision

5 $\frac{1}{4}$ places ($\geq$ 309,999 digits) for DC measured quantities and 4 $\frac{3}{4}$ places ($\geq$ 30,999 digits) for AC measured quantities allow for precision reference measurements and use as a calibration standard for testing devices and assemblies.

RMS Value with Distorted Waveshape

The utilized measuring method allows for waveshape independent RMS measurement (TRMS AC and AC+DC) up to 100 kHz, and up to crest factor 5.

Additional Functions

Continuity testing with acoustic signal, events counting (number and duration), counting of zero-crossings, stopwatch, data-compare and extended-range capacitance measurement. Type J and K thermocouples and platinum sensors can be connected thanks to the integrated temperature measuring function.

Overload Protection

The instrument is safeguarded for up to 600 V in all measuring functions by overload protection. An acoustic signal is generated if the upper voltage or current range limit is exceeded.

FUSE appears at the display if the fuse for the current measuring ranges blows.

Calibration Certificate

The multimeters are furnished with an internationally valid DKD calibration certificate. After the specified calibration interval has elapsed (recommended interval: 1 year), the multimeters can be recalibrated in our own, or any other accredited DKD calibration laboratory.

Although required very rarely, readjustment of the multimeter is possible via the integrated infrared data interface, which necessitates special adjusting software (upon request).

METRA HIT 28S and 29S

Precision Digital Multimeters, Power Meters

Infrared Data Interface

The device can be remote configured, and momentary and saved measurement data (METRA HIT 29S) can be read out via the bidirectional infrared interface supplied as standard equipment. The BD232 or USB-Hit interface adapter, or the SI232-II memory adapter, as well as METRAwin®10/METRAHit® software, are required to this end (see accessories). Device driver software for LabView is available upon request.

Automatic Blocking Sockets (ABS) *

Automatic blocking sockets prevent incorrect connection of measurement cables and inadvertent selection of the wrong measured quantity. This significantly reduces danger to the user, the instrument and the system under test, and in many cases eliminates it entirely.

Automatic Measured Value Storage with Comparison*

The DATA function automatically saves the digitally displayed measured value after settling in. Acoustic signaling is also used to indicate whether the new measured value deviates from the initial reference value less or more than 33% of the measuring range.

Power Saving Circuit

The device is switched off automatically if the measured value remains unchanged for a period of approximately 10 minutes, and if none of the controls are activated during this time. Automatic shutdown can be deactivated.

Connector Jack for External Power Supply

Our NA5/600 can be connected for long term measurement, especially in memory mode operation, and for power disturbance recording. As opposed to common plug-in power packs, the NA5/600 includes a regulated output with minimal residual ripple and coupling capacitance to the mains input, as well as a highly insulated power cable. Measurement accuracy influences are thus minimized, and there is no impairment of electrical safety.

* Patented

Additional Functions for METRA HIT 29S

Power Measurement

The METRA HIT 29S is a compact power meter for direct and alternating current in single-phase systems. The electrical circuit can be connected either directly, or via a current transformer. If a current transformer is connected to the multimeter (mA or A input), all current and power displays are represented with the correct value based upon the selected transformation ratio of 1000:1 or 10,000:1.

Universal power measurement includes the following measuring functions: active, reactive and apparent power, power factor and energy.

Beyond this, the mean power value can be generated over a specified time period (e.g. 15 min.), and the corresponding maximum value can be recorded along with time of occurrence. The following clip-on ammeters are recommended: WZ12D, Z3511, Z3512 and Z3514.

Power Disturbance Recording

The METRA HIT 29S is equipped with a function for acquiring and recording power disturbances which is unique amongst the handheld multimeters. This allows for simultaneous, continuous recording of voltage characteristics and event-triggered recording of voltage dips (> 10 ms) and voltage transients (> 0.5 µs).

One of two different recording and analysis modes can be selected:

1. If a power disturbance occurs, its type, time of occurrence, duration and maximum value are entered to an events list (capacity: 250 events, volatile memory), whose contents can be viewed at the multimeter display.
2. Same as above plus additional recording of measured values to internal measured value memory when events occur (capacity: approx. 60,000 measured values). Memory contents can be read out with METRAwin®10/METRAHit® software and analyzed in detail.

Memory Mode Operation

The METRA HIT 29S is equipped with a quartz-movement synchronized measurement data memory (128 kB), which has enough capacity for 13,000 to 120,000 measured values depending upon configuration. This allows for utilization of the instrument as an autonomous real-time data logger.

Measurement data recording is executed either:

- In a time controlled fashion with an adjustable sampling interval within a range of 0.5 ms (for V DC only) to 10 minutes (see sampling rate in the table on page 3)
- Dependent upon measured value in the event of exceeded limit/delta value
- As an individual measured value by pressing a key

Memory contents can be read out by a PC with the help of the BD232, the SI232-II or the USB-Hit adapter, and can be analyzed and documented with METRAwin®10/METRAHit® analysis software.

Applicable Regulations and Standards

DIN EN 61010, part 1:2001, VDE 0411-1:2002	Safety requirements for electrical equipment for measurement, control and laboratory use
DIN EN 61326 VDE 0843, part 20	Electrical equipment for control technology and laboratory use – EMC requirements
DIN EN 60529 DIN VDE 0470, part 1	Test instruments and test procedures – Degrees of protection provided by enclosures (IP code)

Standard equipment

- 1 multimeter
- 1 protective rubber cover
- 1 cable set:
KS17 for 28S (2 safety measurement cables with test probes)
KS29 for 29S (3 safety measurement cables with test probes)
- 2 batteries
- 1 set operating instructions
- 1 DKD calibration certificate

Guarantee

- 3 years material and workmanship
1 to 3 years for calibration (depending upon application)

METRA HIT 28S and 29S

Ambient Conditions

Operating temp.	–20° C ... +50° C
Storage temp.	–25° C ... +70° C (without batteries)
Relative humidity	Max. 75%, no condensation allowed
Elevation	to 2000 m

Mechanical Design

Housing	Impact resistant plastic (ABS)
Dimensions	84 x 195 x 35 mm
Weight	METRA HIT 28S: approx. 350 g with batteries METRA HIT 29S: approx. 405 g with batteries

Protection Housing: IP 50
Extract from table on the meaning of IP codes

IP XY (1 st digit X)	Protection against foreign object entry	IP XY (2 nd digit Y)	Protection against the penetration of water
5	dust protected	0	not protected

Data Interface

Type	Optical via infrared light through the housing
Data transmission	Serial, bidirectional (not IrDa compatible)
Protocol	Device specific
Baud Rate	8192/9600 baud (selectable)
Functions	– Select / query measuring functions and parameters – Query / transmit current measurement data – Read out stored measurement data (29S only)

BD232, SI232-II and USB-Hit plug-in interface adapters allow for adaptation to common computer interfaces, namely RS 232 C and USB (see accessories).

METRA HIT 28S and 29S

Precision Digital Multimeters, Power Meters

Accessories for operation at a PC

BD232 Interface Adapter

METRA HIT series 20 multimeters can be configured from a PC, and measured data can be transferred live to the PC with the help of the BD232 bidirectional adapter. The adapter has no memory of its own. It can be used to read out data from integrated memory in the METRA HIT 29S (22M and 26M). Up to 6 adapters can be cascaded for the creation of a multi-channel measuring system.

SI232-II Memory adapter

The SI232-II memory adapter, which can be plugged on to the handheld multimeters, includes all of the functions of the above mentioned BD232 adapter, and also allows for storage of measurement data without a PC, as well as subsequent transfer to a PC. Data are synchronized by means of the integrated clock and can be recalled at the adapter's display as well.

Measurement data recording is executed either:

- Time-controlled with an adjustable storage interval ranging from 50 ms (for V DC only) to 1 minute
- Dependent upon measured value in the event of exceeded limit/delta value
- As an individual measured value by pressing a key

Adapters can be cascaded (combination with the BD232 as well) in order to create a multi-channel system.

These adapters are also compatible with the older METRAHit 12S ... 18S multimeter range.

Memory Capacity:

128 kB (corresponds to roughly 60,000... 120,000 measured values, depending upon measuring function and measured value dynamics)

Adjustable Sampling Rate:

50 ms ... 1 min.

USB-Hit Interface Adapter

This adapter is functionally identical to the BD232 interface adapter, although bidirectional transmission takes place between the IR and the USB interface in this case.

It is not possible to set up a multi-channel system with this adapter.

Software METRAwin® 10/METRAHit®

METRAwin® 10/METRAHit® PC software is a multilingual data logging program for recording, visualizing, evaluating and documenting measured values acquired with METRA HIT multimeters. Communications between the PC and the measuring instrument(s) is established via available interfaces and memory adapters. Telephone modems can be interconnected as well. Depending upon device type, one or several of the following operating modes are possible:

- **Device Configuration**
Remote configuration and querying of device-specific functions and parameters, for example measuring function, measuring range and memory parameters. Frequently used device settings can be saved to configuration files for easy recall.
- **Online Recording of Measurement Data**
Read-in, display and recording of current measurement data from the interconnected device
 - Measuring channels Up to 10
 - Start recording Manual, triggered by measured value, time triggered
 - Recording mode
 - > Time controlled with sampling interval of 0.05 s* ... 1 s ... 60 min.
 - > Manually controlled
 - > Measured-value controlled in the event of exceeded limit/delta value
 - Recording duration Max. 10 million intervals

* Depending upon device type, measuring function, number of measuring channels and communication mode (e.g. via modem), sampling intervals of less than 1 second cannot be used.

Reading Out and Visualizing Stored Data

If supported by the device: read-in and display of offline data recorded to device memory

For purposes of analysis, data recorded online or read in from the device's memory can be displayed in various formats:

Y(t) Recorder Display for Up to 6 Channels

XY Recorder Display for Up to 4 Channels

Multimeter Display for Up to 4 Channels

Tabular Display for Up to 10 Channels

System Requirements

METRAwin 10 (version 5.x) can be run on IBM compatible PCs with Microsoft Windows® 95, 98, ME, NT 4.0, 2000 or XP.

METRA HIT 28S and 29S

Precision Digital Multimeters, Power Meters

Accessories

METRA HIT EMA1 – Energy Measuring Adapter for Ferraris Meters

A METRA HIT 29S can be connected to a Ferraris meter via the EMA1 for measurement and recording of 3-phase energy curves. The meter pulse is acquired optically and is evaluated and recorded with a programmable factor. Recorded data can be analyzed as a characteristic load profile with METRAwin[®]10/METRAHit[®] software.

HitBag Cordura Belt Pouch

For METRA HIT series multimeters (with/without protective rubber cover) and METRAport

HC20 Hard Case

For multimeters (with/without GH18 protective rubber cover) and accessories

NA5/600 Mains Power Pack

Output:

5 V–, max. 600 mA, linear controlled with minimal residual ripple and coupling capacitance to the mains input, highly insulated (CAT III/600 V)

Input:

230 V~ ±10%, 50/60 Hz

We recommend our power pack in combination with a commercially available mains adapter for Euro plugs for countries with line voltage ranging from 220 to 240 V, but with other mains plugs.

PMA16 Power Measuring Adapter

The adapter is used for safe, trouble-free measurement of current consumption (up to 16 A) at earthing contact plugs, as well as for connecting the voltage path to the METRA HIT 29S for power measurement.

Order Information

Designation	Type	Article Number
Precision digital multimeter including KS17 cable set, battery, GH18 and DKD calibration certificate	METRA HIT 28S	M228A
Precision digital multimeter and power meter including KS29 cable set, battery, GH18 and DKD calibration certificate	METRA HIT 29S	M229A
Power pack, 230 V~ /5 V–, 600 mA	NA5/600	Z218F
