

# COMPACT SCR REGULATED SCR-1P Series Models 6427B-6448B

## POWER SUPPLIES

The SCR-1P Series consists of eight regulated dc power supplies utilizing silicon-controlled rectifiers in series with the transformer primary. Controlled by the output voltage and current settings, these supplies accomplish the desired regulation using Harrison's unique "Ramp-Lock" phase control circuit. This circuit technique permits a reduction in the overall size and weight of the power supply and results in up to 75% efficiency at full output. Four models with output ratings of approximately 300 watts are packaged in a 3½" high rack mounting cabinet, while the four models with approximately 900 watt output power capability are 5¼" high. All supplies may also be used on the bench (attachable rubber feet for bench use available on request). These second generation SCR regulated power supplies also feature lower output ripple, tighter load and line regulation, and Constant Voltage/Constant Current operation with automatic crossover, and all-silicon circuitry.

### Advantages:

- Output continuously variable to zero in either voltage or current mode
- Efficiency up to 75% at full output
- Excellent line transient immunity
