Comments:

The FM-2026 soldering iron is designed to supply hot nitrogen (N₂) to the soldering area. The soldering efficiency can be improved as the nitrogen reduces the amount of oxygen in the solder connection area. With less oxidation there will be less oxidation. The hot gas will also have a preheating affect on the connection area.

Part number FM2026-KIT includes a FM2026-01 and FX-791 Nitrogen Controller.

Solder station, tips (T13 series tips) and nozzle assembly are NOT included.
