Comments:

HAKKO FU-500 is an intelligent solder feeding unit that, together with the HAKKO FU-601 soldering station, can be integrated with various robotic system to achieve low cost intelligent soldering automation.

The FU-500 supports solder diameter 0.3mm to 1.6mm and it allows easy adjustment of solder feed position which is critical for automatic soldering systems. System also features a compact driver unit that allows the solder feed unit to be brought closer to the iron, increase the accuracy of amount of solder feeding. Two types of feeder orientations can be chosen to adapt to different robot style.

With an optical sensor for solder movement, FU-500 can detect solder clogging, slipping and the end of the roll. The unit is also equipped with mechanism that perforates into the solder wire as countermeasure against flux and solder ball splash, and the acceptable solder wire diameter can be changed by simply replacing the pulley unit.
