Safety Precautions

The following safety precautions should be observed before using this product and any associated instrumentation. Although some instruments and accessories would normally be used with non-hazardous voltages, there are situations where hazardous conditions may be present.

This product is intended for use by qualified personnel who recognize shock hazards and are familiar with the safety precautions required to avoid possible injury. Read the operating information carefully before using the product.

The types of product users are:

Responsible body is the individual or group responsible for the use and maintenance of equipment, for ensuring that the equipment is operated within its specifications and operating limits, and for ensuring that operators are adequately trained.

Operators use the product for its intended function. They must be trained in electrical safety procedures and proper use of the instrument. They must be protected from electric shock and contact with hazardous live circuits.

Maintenance personnel perform routine procedures on the product to keep it operating, for example, setting the line voltage or replacing consumable materials. Maintenance procedures are described in the manual. The procedures explicitly state if the operator may perform them. Otherwise, they should be performed only by service personnel.

Service personnel are trained to work on live circuits, and perform safe installations and repairs of products. Only properly trained service personnel may perform installation and service procedures.

Exercise extreme caution when a shock hazard is present. Lethal voltage may be present on cable connector jacks or test fixtures. The American National Standards Institute (ANSI)

1

states that a shock hazard exists when voltage levels greater than 30V RMS, 42.4V peak, or 60VDC are present. **A good safety practice is to expect that hazardous voltage is present in any unknown circuit before measuring.**

Users of this product must be protected from electric shock at all times. The responsible body must ensure that users are prevented access and/or insulated from every connection point. In some cases, connections must be exposed to potential human contact. Product users in these circumstances must be trained to protect themselves from the risk of electric shock. If the circuit is capable of operating at or above 1000 volts, **no conductive part of the circuit may be exposed.**

As described in the International Electrotechnical Commission (IEC) Standard IEC 664, digital multimeter measuring circuits (e.g., Keithley Models 175A, 199, 2000, 2001, 2002, and 2010) are Installation Category II. All other instruments' signal terminals are Installation Category I and must not be connected to mains.

Do not connect switching cards directly to unlimited power circuits. They are intended to be used with impedance limited sources. NEVER connect switching cards directly to AC mains. When connecting sources to switching cards, install protective devices to limit fault current and voltage to the card.

Before operating an instrument, make sure the line cord is connected to a properly grounded power receptacle. Inspect the connecting cables, test leads, and jumpers for possible wear, cracks, or breaks before each use.

For maximum safety, do not touch the product, test cables, or any other instruments while power is applied to the circuit under test. ALWAYS remove power from the entire test system and discharge any capacitors before: connecting or disconnecting cables or jumpers, installing or removing switching cards, or making internal changes, such as installing or removing jumpers.

2

Do not touch any object that could provide a current path to the common side of the circuit under test or power line (earth) ground. Always make measurements with dry hands while standing on a dry, insulated surface capable of withstanding the voltage being measured.

The instrument and accessories must be used in accordance with its specifications and operating instructions or the safety of the equipment may be impaired.

Do not exceed the maximum signal levels of the instruments and accessories, as defined in the specifications and operating information, and as shown on the instrument or test fixture panels, or switching card.

When fuses are used in a product, replace with same type and rating for continued protection against fire hazard.

Chassis connections must only be used as shield connections for measuring circuits, NOT as safety earth ground connections.

If you are using a test fixture, keep the lid closed while power is applied to the device under test. Safe operation requires the use of a lid interlock.

If a ⏚ screw is present, connect it to safety earth ground using the wire recommended in the user documentation.

The ⚠ symbol on an instrument indicates that the user should refer to the operating instructions located in the manual.

The ⚡ symbol on an instrument shows that it can source or measure 1000 volts or more, including the combined effect of normal and common mode voltages. Use standard safety precautions to avoid personal contact with these voltages.

The **WARNING** heading in a manual explains dangers that might result in personal injury or death. Always read the associated information very carefully before performing the indicated procedure.

3

The **CAUTION** heading in a manual explains hazards that could damage the instrument. Such damage may invalidate the warranty.

Instrumentation and accessories shall not be connected to humans.

Before performing any maintenance, disconnect the line cord and all test cables.

To maintain protection from electric shock and fire, replacement components in mains circuits, including the power transformer, test leads, and input jacks, must be purchased from Keithley Instruments. Standard fuses, with applicable national safety approvals, may be used if the rating and type are the same. Other components that are not safety related may be purchased from other suppliers as long as they are equivalent to the original component. (Note that selected parts should be purchased only through Keithley Instruments to maintain accuracy and functionality of the product.) If you are unsure about the applicability of a replacement component, call a Keithley Instruments office for information.

To clean an instrument, use a damp cloth or mild, water based cleaner. Clean the exterior of the instrument only. Do not apply cleaner directly to the instrument or allow liquids to enter or spill on the instrument. Products that consist of a circuit board with no case or chassis (e.g., data acquisition board for installation into a computer) should never require cleaning if handled according to instructions. If the board becomes contaminated and operation is affected, the board should be returned to the factory for proper cleaning/servicing.

2/99

Introduction

This quick reference guide includes summary information on front panel and IEEE-488 operation for the Model 2001 Multimeter. For detailed information, consult the Model 2001 Operator's Manual, the Model 2001 Calibration Manual, and the Model 2001-SCAN Scanner Card Instruction Manual.

Operation Summary

Default Configuration

The Model 2001 can save from one to ten user setups in memory, depending on the installed memory option. You can select one of the user setups as the power-on default, or have the instrument power up to either of the two factory defaults (optimized for "BENCH" or "GPIB" operation). Reset the instrument to "BENCH" defaults from the front panel by performing the following steps:

1. Press the MENU key to display the main menu:

   MAIN MENU
   SAVESETUP   GPIB   CALIBRATION ▶
   ◀ TEST   LIMITS   STATUS-MSG   GENERAL

2. If the SAVESETUP option is not blinking, press the ◀ key until it is blinking and then press ENTER to view the setup menu:

   SETUP MENU
   SAVE   RESTORE   POWERON   RESET

3. Select the RESET option and press ENTER to view the reset menu:

   RESET ORIGINAL DFLTS
   BENCH   GPIB

4. Select the BENCH option and press ENTER. The following message is displayed:

   RESETTING INSTRUMENT
   ENTER to confirm; EXIT to abort

5. Press ENTER to confirm. The display will show DC voltage readings with autorange enabled.

6

Assuming the Model 2001 is set to primary address 16, the instrument can be reset and the reading displayed on the computer CRT from the IEEE-488 bus with the following code fragment:

```
100   OUTPUT 716;":syst:pres"
110   OUTPUT 716;":fetc?"
120   ENTER 716;A$
130   PRINT A$
```

Instrument Connections

Each measurement function has an appropriate connection scheme. Connections for all functions can be found in Section 3 of the Model 2001 Operator's Manual. The following steps summarize making DC voltage measurements with the Model 2001:

1. Select the front input jacks with the INPUTS button (outer position for front jacks, inner position for rear).

2. Using the set of supplied test leads, connect the Model 2001 to a DC voltage source (e.g., a battery) as shown in Figure 1.

3. Use the RANGE keys to select autoranging or a manual range. Pressing the AUTO range key toggles autoranging. You can select a different range with the ▲ RANGE and ▼ RANGE keys. The following code statement enables autoranging on the DCV function:

    ```
    100   OUTPUT 716;":volt:dc:rang:auto   on"
    ```

Model 2001
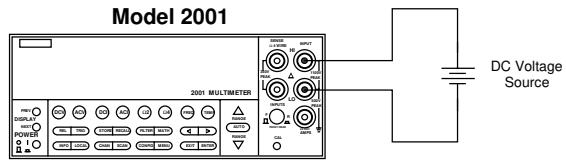

Input Resistance = 10MΩ on 1000V and 200V ranges ;
> 10GΩ on 20V, 2V and 200mV ranges.
= 1MΩ on DCV peak spikes measurement.

Caution : Maximum Input = 1100V peak

Figure 1. Typical DC voltage connections

Changing the Configuration

Each measurement function and operation has the default settings that are listed in Table 18. For example, the default settings for DC voltage are as follows:

• Measurement speed (integration time)— Normal, 1 power line cycle.

• Digital filter — Advanced, 10 readings, 1% noise tolerance, moving average.

• Display resolution — 6.5 digits.

If these settings are not sufficient for your application, they can be changed through configuration menus. For example, to configure the DC voltage function to store high speed measurements, follow these steps:

1. Press CONFIG key and then the DCV key to view

8

the DCV configuration menu:

CONFIGURE DCV
SPEED   FILTER   RESOLUTION

2. Select SPEED from the menu, then press ENTER.
The multimeter displays the following menu:

DCV MEASUREMENT SPEED
NORMAL   FAST   MEDIUM   HIACCURACY ▶
◀ SET-SPEED-EXACTLY   SET-BY-RESLN

3. Using the cursor keys, select the FAST option, then
press ENTER. Since the resolution is set to AUTO,
where it defaults to a value appropriate for the
speed, it will be set to 4.5d automatically.

4. Press EXIT to return to the normal display.

To store readings in the instrument's data storage buffer,
perform the following:

1. Press the STORE key. The following message is dis-
played:

STORE 00100 READINGS
Use ◀ , ▶ , ▲ , ▼ , ENTER, EXIT, or INFO

2. Use the cursor and RANGE keys to change the
number of readings stored, or just press ENTER to
start storing readings.

To recall the stored readings, perform the following:

1. Press RECALL to view the readings. The following
message is displayed with the cursor on the least
significant digit of the reading number:

9

+000.0000 mVDC
Rdg#+00000 @Time =+000.000000 sec

2. Use the RANGE keys to increment and decrement the reading number and scroll through the buffer.

3. The NEXT and PREV DISPLAY keys can be used while recalling readings to access additional buffer data, such as maximum and minimum readings.

The following code fragment configures the Model 2001 for high speed DC voltage readings, stores 100 readings, and sends the readings over the bus:

```
100  OUTPUT 716;":syst:pres"
110  OUTPUT 716;":volt:dc:nplc  0.01"
120  OUTPUT 716;":trac:clear"
130  OUTPUT 716;":trac:feed  calc"
140  OUTPUT 716;":trac:egr  full"
150  OUTPUT 716;":trac:poin  100"
160  OUTPUT 716;":trac:feed:cont  next"
170  OUTPUT 716;":trac:data?"
180  ENTER 716;A$
190  PRINT A$
```

Multiple Displays

Each measurement function has its own set of "multiple displays" shown on the bottom line of the front panel display. To scroll through the multiple displays available for the present function, repeatedly press and release the NEXT DISPLAY key. The same action with the PRE-Vious DISPLAY key does a reverse scroll through the displays. To return to the default reading display, just press and hold either key.

Table 1. Multiple displays by function

Function	Next display
All	Bar graph Zero-centered bar graph Maximum and minimum values Relative and actual values Calculated and actual values (see Note 1) Limits bar graph (see Note 1) Adjacent channel readings (see Note 2)
DC voltage	DC volts, AC ripple voltage and frequency Positive peak spikes and highest value Negative peak spikes and lowest value Positive and negative peak spikes
AC voltage	AC RMS voltage, frequency, and crest factor AC RMS, average, and peak voltages
DC current	(none specific to function)
AC current	AC RMS (or average) current and frequency AC RMS and average current
2-wire resistance	Source current Voltage drop across DUT
4-wire resistance	Source current Voltage drop across DUT Lead resistance
Frequency	Period calculation Trigger level

11

Table 1. Multiple displays by function (cont.)

Function	Next display
Temperature	Celsius, Fahrenheit, and Kelvin units RTD resistance (or thermocouple voltage) Reference junction (thermocouples only)
Data storage buffer	Maximum and minimum values Average and standard deviation

Notes:

1. Multiple displays for calculated values and limits bar graph are not available for the frequency function.
2. The multiple display for adjacent channel readings is not available for the DC and AC current functions.

Menu Structures

The desired menu is displayed by pressing the appropriate key or sequence:

- CONFIG and then DCV (or ACV, DCI, ACI, Ω2, Ω4, FREQ, TEMP) — Shows the configuration menu for each measurement function.

- CONFIG and then NEXT DISPLAY (or PREV DISPLAY, REL, TRIG, STORE, FILTER, MATH, CHAN, SCAN) — Shows the configuration menu for the multiple displays and each measurement operation.

- MENU — The main menu accesses items for which there are not dedicated keys.

Once in a menu structure, place the cursor (◀ and ▶ keys) on the desired selection and press ENTER. Use the cursor keys, RANGE ▲ and RANGE ▼ keys to enter parameters. Use the EXIT key to back out of a menu structure and disable a menu.

Table 2. CONFIGURE DCV menu structure

Menu item	Description
SPEED	Measurement speed (integration time) menu:
NORMAL	Select 1 PLC (power line cycle, 16.67msec for 60Hz, 20msec for 50Hz and 400Hz).
FAST	Select 0.01 PLC.
MEDIUM	Select 0.1 PLC.
HIACCURACY	Select 10 PLC.
SET-SPEED-EXACTLY	Set integration time in PLC (0.01-10).
SET-BY-RSLN	Default to setting appropriate for resolution.
ANALOG-FILTER	Enable (ON) or disable (OFF) analog filter.

13

Table 2. CONFIGURE DCV menu structure (cont.)

Menu item	Description
FILTER	Digital filter menu:
AUTO	Default to filter appropriate for integration time.
AVERAGING	Program a simple average filter (1-100 readings).
ADVANCED	Program a simple average filter (1-100 readings) with a noise tolerance window (0-100% of range).
AVERAGING-MODE	Select moving average or repeating average mode.
RESOLUTION	Display resolution menu:
AUTO	Default to resolution appropriate for integration time.
3.5d, 4.5d, 5.5d, 6.5d, 7.5d	Select a specific resolution.

    DEFAULT
 	
  CHOOSE-FUNCTIONS
 	
    SELECT CHAN=01
 	
      CHANNEL #01 FUNCTION
	Sets number of external
	  channels and functions:
	  # of external channels (1-
	    80).
	    Selects default function
	      for all external chan-
	      nels.
	  Use to select channel
	    functions.
	    Select channel using
	      range and cursor
	      keys.
	      Select function using
	        cursor keys.

SAVE-ALT-FCN	Stores present function as alternate.
RESTORE-ALT-FUNCTION	Restores saved alternate function.

Table 16. SCAN OPERATION menu structure

Menu item	Description
INTERNAL	Enables internal scanning.
EXTERNAL	Enables external scanning.

RATIO
  MEASURE
  REFERENCE
  FUNCTION
	Enables ratio mode (internal).
	  Selects measure channel.
	  Selects reference channel.
	  Selects ratio function.

DELTA
  MEASURE
  REFERENCE
  FUNCTION
	Enables delta mode (internal).
	  Selects measure channel.
	  Selects reference channel.
	  Selects delta function.

Table 17. Main menu structure

Menu item	Description
SAVESETUP	Setup menu:
SAVE	Save setup at a memory location (up to 1, 5, or 10).
RESTORE	Return 2001 to setup stored at a memory location (up to 1, 5, or 10).
POWERON	Power-on Menu:
BENCH	Power on to bench default setup conditions.
GPIB	Power on to GPIB default setup conditions.
USER-SETUP-NUMBER	Power on to setup stored at a memory location (up to 1, 5, or 10).
RESET	Reset Menu:
BENCH	Return 2001 to bench default setup.
GPIB	Return 2001 to GPIB default setup.

29

Table 17. Main menu structure (cont.)

Menu item	Description
GPIB	GPIB/Printer Setup menu:
ADDRESSABLE	Check/change IEEE-488 bus address (0-30).
TALK-ONLY	GPIB/Printer Talk-only mode menu:
FEED	GPIB Output Feed menu:
AFTER-CALC	Specify reading after math operation.
BEFORE-CALC	Specify reading before math operation.
NONE	Specify no readings.
INTERFACE	Select printer interface.
IEEE-488	Specify IEEE-488 printer.
CENTRONICS	Specify Centronics parallel printer.
INTERVAL	Specify printing interval (every reading to 1 out of 9999).
FORMFEED	Formfeeds menu:
CONTROL	Enable/disable page breaks.
SET-PAGE-SETUP	Set number line between form feeds (1-255).
ELEMENTS	Select GPIB data elements (reading, units, reading number, channel number, timestamp, status).
STATUS	Display IEEE-488 bus status byte.
CALIBRATION	Calibration menu:
COMPREHENSIVE	Perform DC and AC calibration.
AC-ONLY-CAL	Perform AC calibration only (open-circuit).
CALIBRATION-DATES	Check/change calibration date.
TEST	Self-test menu:
BUILT-IN-TEST	Test analog and digital boards.
AUTOMATIC	Run all tests automatically.
MANUAL	Select tests to run.
DIAGNOSTICS	Factory diagnostic tests.
FRONT-PANEL-TESTS	Test display board.
KEYS	Verify operation of front panel keys.
DISPLAY-PATTERNS	Verify operation of display.

Table 17. Main menu structure (cont.)

Menu item	Description
LIMITS	Limits menu:
LIMIT-SET-1	Limit-Set-1 menu:
CONTROL	Enable/disable limit set #1.
LOLIM1	Set value of low limit #1.
HILIM1	Set value of high limit #1.
LIMIT-SET-2	Limit-Set-2 menu:
CONTROL	Enable/disable limit set #2.
LOLIM2	Set value of low limit #2.
HILIM2	Set value of high limit #2.
STROBE-CONTROL	Enable/disable limit strobe signal of digital output #4 when trigger occurs.
PASS-PATTERN	Specify patterns on digital outputs to signify limits pass.
STATUS-MSG	Enable/disable status message mode.
GENERAL	General menu:
DIGITAL-I/O	Digital I/O menu:
OUTPUT-STATE	Check/change states of digital output lines.
OUTPUT-SENSE	Check/change sense of digital output lines.
INPUT	Read digital input line.
SERIAL#	Display serial number, memory option, SCPI version, and firmware revisions.
AUTOZERO	Disable or enable normal (after every reading) or synchronous (every 200ms) autozero mode.
GENERAL	
LINE-SYNC	Enable/disable line synchronization of measurements.
DECIMAL	Select period or comma for display of decimal point.

31

Default Conditions

Table 18. Factory default conditions

Function or operation	Bench default	GPIB default
AC current:		
AC-type	RMS	RMS
Coupling	AC	AC
Filter	Off	Off

IEEE-488.2 Common Commands and Queries

Table 21. IEEE-488.2 common commands and queries

Mnemonic	Name	Description
*CLS	Clear status	Clears all event registers, and Error Queue.
*ESE <NRf>	Event Enable command	Sets Standard Event Enable Register.
*ESE?	Event Enable query	Reads Standard Event Enable Register.
*ESR?	Event status register query	Reads Standard Event Status Register and clears it.
*IDN?	Identification query	Reads ID information of instrument.
*OPC	Operation complete command	Sets the OPC bit in the Standard Event Status Register after all pending commands have been executed.
*OPC?	Operation complete query	Places an ASCII "1" into the output queue when all pending selected device operations have been completed.
*OPT?	Option identification query	Reads ID code of options present (memory, scanner).
*RCL <NRf>	Recall command	Returns the 2001 to the setup configuration stored in the designated memory location.
*RST	Reset command	Returns the 2001 to the *RST default conditions.
*SAV <NRf>	Save command	Saves the current setup configuration to the designated memory location.
*SRE <NRf>	Service request enable command	Sets Service Request Enable Register.

56

Table 21. IEEE-488.2 common commands and queries (cont.)

Mnemonic	Name	Description
*SRE?	Service request enable query	Reads Service Request Enable Register.
*STB?	Read status byte query	Reads Status Byte Register.
*TRG	Trigger command	Issues a bus trigger.
*TST?	Self-test query	Performs a checksum test on ROM and return the results.
*WAI	Wait-to-continue command	Wait until all previous commands are executed.

57

SCPI Command Subsystems

Notes:

1. Brackets ([ ]) are used to denote optional character sets. These optional characters do not have to be included in the program message. Do not use brackets ([ ]) in the program message.

2. Angle brackets (< >) are used to indicate parameter type. Do not use angle brackets (< >) in the program message.

3. Upper case characters indicate the short-form version for each command word.

Table 22. Signal oriented measurement commands

Command	Description
:FETCh?	Requests the latest reading (SCPI) or a fresh reading (FRESh).
:CONFigure:<function>	Places the 2001 in a "one-shot" measurement mode for the specified function.
:READ?	Performs an :ABORt, :INITiate, and a FETCh?.
:MEASure[:<function>]?	Performs an :ABORt, :CONFigure :<function>, and a :READ?.

Table 23. Calculate command summary

Command	Description
:CALCulate[1] :FORMat <name> :FORMat? :KMATh :MMFactor <NRf> :MMFactor? :MBFactor <NRf>	Subsystem to control CALC 1: Select math format: MXB, PERCent, NONE. Query math format. Path to configure math calculations: Specify "m" for mX+b (-9.999999e20 to +9.999999e20). Query "m" factor. Specify "b" for mX+b (-9.999999e30 to +9.999999e30).

58

Table 23. Calculate command summary (cont.)

Command	Description
:CALCulate[1]	
:KMATh	
:MBFactor?	Query "b" factor.
:PERCent <NRf>	Set PERCENT value (-9.999999e35 to +9.999999e35).
:PERCent?	Query PERCENT.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) calculation.
:STATe?	Query state of math function.
:DATA?	Read math result of CALC 1.
:IMMediate	Recalculate input data.
:CALCulate2	Subsystem to control CALC 2:
:FORMat <name>	Select math format: MEAN, SDEViation, MAXimum, MINimum, PKPK, NONE.
:FORMat?	Query math format.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) calculation.
:STATe?	Query state of math function.
:IMMediate	Recalculate raw input data in buffer.
:DATA?	Read math result of CALC 2.
:CALCulate3	Subsystem to control CALC 3 (limit tests):
:LIMit[1]	Path to control LIMIT 1 test:
:UPPer	Path to configure upper limit:
[:DATA] <n>	Specify upper limit (-9.999999e35 to +9.999999e35).
[:DATA]?	Query upper limit.
:SOURce <NRf>	Specify digital output (0 to 15).
:SOURce?	Query source.
:LOWer	Path to configure lower limit:
[:DATA] <n>	Specify lower limit (-9.999999e35 to +9.999999e35).
[:DATA]?	Query lower limit.
:SOURce <NRf>	Specify digital output (0 to 15).
:SOURce?	Query source.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) limit test.
:STATe?	Query state of limit test.
:FAIL?	Query test result (1 = pass, 0 = fail).
:CLEAR	Path to clear failed test:

59

Table 23. Calculate command summary (cont.)

Command	Description
:CALCulate3	
:LIMit[1]	
:CLEAR	
[:IMMediate]	Clear failed test indication.
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto clear.
:AUTO?	Query auto clear.
:LIMit2	Path to control LIMIT 2 test:
:UPPer	Path to configure upper limit:
[:DATA] \<n>	Specify upper limit (-9.999999e35 to +9.999999e35).
[:DATA]?	Query upper limit.
:SOURce \<NRf>	Specify digital output (0 to 15).
:SOURce?	Query source (digital output value).
:LOWer	Path to configure lower limit:
[:DATA] \<n>	Specify lower limit (-9.999999e35 to +9.999999e35).
[:DATA]?	Query lower limit.
:SOURce \<NRf>	Specify digital output (0 to 15).
:SOURce?	Query source (digital output value).
:STATe \<b>	Enable (1 or ON) or disable (0 or OFF) limit test.
:STATe?	Query state of limit test.
:FAIL?	Query test result (1 = pass, 0 = fail).
:CLEAR	Path to clear failed test:
[:IMMediate]	Clear failed test indication.
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto clear.
:AUTO?	Query auto clear.
:PASS	Path to define "pass" digital output pattern.
:SOURce \<NRf>	Specify digital output (0 to 15).
:CLIMits	Command path for composite limits:
:FAIL?	Query composite result of LIMIT 1 and LIMIT 2 tests (1 = pass, 0 = fail).
:BSTRobe	Path to control limit binning strobe:
:STATe \<b>	Enable (1 or ON) or disable (0 or OFF) strobe.
:STATe?	Query state of binning strobe.
:IMMediate	Re-perform limit tests.

60

Table 24. CALibrate command summary

Command	Description
:CALibration	Calibration root command.
:PROTected	All commands in this subsystem are protected by the CAL switch.
:LOCK	Lock out calibration (opposite of enabling cal with CAL switch).
:SWITch?	Request comprehensive CAL switch state. (0 = locked; 1 = unlocked)
:SAVE	Save cal constants to EEPROM.
:DATA?	Download cal constants from 2001.
:DATE "<string>"	Send cal date to 2001.
:DATE?	Request cal date from 2001.
:NDUE "<string>"	Send next due cal date to 2001.
:NDUE?	Request next due cal date from 2001.
:LLEVel	Low-level calibration sub-system.
:SWITch?	Request low-level CAL switch state. (0 = locked; 1 = unlocked)
:STEP <Step #>	
1	20V AC at 1kHz step.
2	20V AC at 30kHz step.
3	200V AC at 1kHz step.
4	200V AC at 30kHz step.
5	1.5V AC at 1kHz step.
6	0.2V AC at 1kHz step.
7	5mV AC at 100kHz step.
8	0.5mV AC at 1kHz step.
9	+2V DC step.
10	-2V DC step.
11	0V DC step.
12	20mA AC at 1kHz step.
13	+0.2A DC step.
14	+2A DC step.
15	2V AC at 1Hz step.
:STEP?	Request the current calibration step.
:CALCulate	Calculate low-level cal constants.

61

Table 24. CALibrate command summary (cont.)

Command	Description
:CALibration	
:PROTected	
:DC	User calibration subsystem.
:ZERO	Low-thermal short calibration step.
:LOW <NRf>	+2V DC calibration step.
:HIGH <NRf>	+20V DC calibration step.
:LOHM <NRf>	20kΩ calibration step.
:HOHM <NRf>	1MΩ calibration step.
:OPEN	Open circuit calibration step.
:CALCulate	Calculate DC cal constants.
:UNPRotected	All commands in this subsystem are not protected by CAL switch.
:ACCompensation	Perform user AC calibration (disconnect all cables).

Table 25. DISPlay command summary

Command	Description
:DISPlay	
[:WINDow[1]]	Path to locate message to top display.
:TEXT	Path to control user text messages.
:DATA <a>	Define ASCII message "a" using up to 20 characters.
:DATA?	Query text message.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) message mode.
:STATe?	Query text message mode (0 or 1).
:DATA?	Query data on top portion of display.
:WINDow2	Path to locate message to bottom display.
:TEXT	Path to control user text messages.
:DATA <a>	Define ASCII message "a" using up to 32 characters.
:DATA?	Query text message.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) message mode.
:STATe?	Query text message mode (0 or 1).
:DATA?	Query data on bottom portion of display.

Table 25. DISPlay command summary (cont.)

Command	Description
:DISPlay	
:CNDisplay	Clear NEXT (or PREV) display messages and cancel associated operations.
:SMESsage <b>	Enable (1 or ON) or disable (0 or OFF) status message mode.
:SMESsage?	Query status message mode (0 or 1).
:ENABle <b>	Turn on (1 or ON) or turn off (0 or OFF) the front panel display.
:ENABle?	Query state of the display (0 or 1).

Table 26. FORMat command summary

Command	Description
:FORMat	
[:DATA] <type>[,<length>]	Select data format: ASCii REAL, 32 REAL, 64 SREal DREal
[:DATA]?	Query data format.
:ELEMents <item list>	Specify data elements: READing, CHANnel, RNUMber, UNITs, TIMEstamp and STATus.
:ELEMents?	Query data elements.
:BORDer <name>	Select binary byte order: NORMal, SWAPped.
:BORDer?	Query byte order.

63

Table 27. OUTPut command summary

Command	Description
:OUTPut	
:TTL[1]	Path to set polarity of digital out-put line 1:
:LSENse <name>	Select polarity; active (AHIGH) or active (ALOW).
:LSENse?	Query polarity of line 1.
:TTL2	Path to set polarity of digital out-put line 2:
:LSENse <name>	Select polarity; active (AHIGH) or active (ALOW).
:LSENse?	Query polarity of line 2.
:TTL3	Path to set polarity of digital out-put line 3:
:LSENse <name>	Select polarity; active (AHIGH) or active (ALOW).
:LSENse?	Query polarity of line 3.
:TTL4	Path to set polarity of digital out-put line 4:
:LSENse <name>	Select polarity; active (AHIGH) or active (ALOW).
:LSENse?	Query polarity of line 4.

Table 28. ROUTe command summary

Command	Description
:ROUTe	
:CLOSe <list>	Path and command to close speci-fied channel:
:STATe?	Query closed channel.
:CLOSe? <list>	Query specified channels (1 = closed, 0 = open).
:OPEN <list>	Open specified channel or all channels.
:OPEN:ALL	Open all channels.
:OPEN? <list>	Query specified channels (1 = open, 0 = closed).
:SCAN	Command path to configure and control scan operations:
[:INTernal] <list>	Specify an internal scan list (2 to 10 channels).

64

Table 28. ROUTe command summary (cont.)

Command	Description
:ROUTe	
:SCAN	
[:INTernal]?	Query the internal scan list.
:FUNCtion <list>, <name>	Assign measurement function to specified channels.
:FUNCtion? <list>	Query function for each specified channel.
:EXTernal <list>	Specify an external scan list (2 to 80 channels).
:EXTernal?	Query the external scan list.
:FUNCtion <list>, <name>	Assign measurement function to specified channels.
:FUNCtion? <list>	Query function for each specified channel.
:RATio	Command path to configure ratio calculation:
:FUNCtion <name>	Specify function for Ratio ('VOLTage:DC', 'RESistance' or 'FRESistance').
:FUNCtion?	Query Ratio function.
:RCHannel <list>	Specify reference channel (1 to 10).
:RCHannel?	Query reference channel.
:MCHannel <list>	Specify measure channel (1 to 10).
:MCHannel?	Query measure channel.
:DELTa	Command path to configure delta calculation:
:FUNCtion <name>	Specify function for Delta ('VOLTage:DC', 'RESistance' or 'FRESistance').
:FUNCtion?	Query Delta function.
:RCHannel <list>	Specify reference channel (1 to 10).
:RCHannel?	Query reference channel.
:MCHannel <list>	Specify measure channel (1 to 10).
:MCHannel?	Query measure channel.
:LSELect <name>	Select scan operation: INTernal, EXTernal, RATio, DELTa, NONE.
:LSELect?	Query scan operation.

65

Table 29. Sense command summary

Command	Description
[:SENSe[1]]	
:ALTernate[1]	Path to control an Alternate setup.
:SAVE	Save current setup as Alternate setup.
:RECall	Return instrument to Alternate setup.
:FUNCtion <name>	Select measurement function: 'VOLTage:AC', 'VOLTage: DC','RESIstance', 'FRESis-tance','CURRent:AC', 'CUR-Rent:DC','FREQuency', 'TEMPerature'
:FUNCtion?	Query function.
:DATA	Path to select reading type:
[:LATest]?	Query the latest reading.
:FRESh?	Query a fresh reading.

Table 29. Sense command summary (cont.)

Command	Description
:CURRent:AC	Path to configure AC current.
:APERture \<n\>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles \<n\>	Specify integration rate (number of line cycles; 0.01 to 10).
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.
:COUPling AC|DC	Specify input coupling.
:COUPling?	Query input coupling.
:RANGe	Path to configure measurement range:
[:UPPer] \<n\>	Select range (0 to +2.1).
[:UPPer]?	Query range.
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto range.

67

Table 29. Sense command summary (cont.)

Command	Description
:CURRent:AC	
:RANGe	
:AUTO ONCE	Set range based on present input signal.
:ULIMit <n>	Specify upper limit for auto range (0 to +2.1).
:ULIMit?	Query upper limit.
:LLIMit <n>	Specify lower limit for auto range (0 to +2.1).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence <n>	Specify reference (REL) value (-2.1 to +2.1).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 to 8).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).
:NTOLerance?	Query noise tolerance level.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) advanced filter.

68

Table 29. Sense command summary (cont.)

Command	Description
:CURRent:AC	
:AVERage	
:ADVanced	
[:STATe]?	Query state of advanced filter.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:DETector	Path to select function:
[:FUNCtion] <name>	Select type of AC measurement: RMS, AVERage.
[:FUNCtion]?	Query detector function.
:CURRent:DC	Path to configure DC current.
:APERture <n>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles <n>	Specify integration rate (number of line cycles; 0.01 to 10).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.
:RANGe	Path to configure measurement range:
[:UPPer] <n>	Select range (0 to 2.1).
[:UPPer]?	Query range.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto range.

69

Table 29. Sense command summary (cont.)

Command	Description
:CURRent:DC	
:RANGe	
:AUTO ONCE	Set range based on present input signal.
:ULIMit <n>	Specify upper limit for auto range (0 to 2.1).
:ULIMit?	Query upper limit.
:LLIMit <n>	Specify lower limit for auto range (0 to 2.1).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence <n>	Specify reference (REL) value (-2.1 to +2.1).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 to 8).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).
:NTOLerance?	Query noise tolerance level.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) advanced filter.

70

Table 29. Sense command summary (cont.)

Command	Description
:CURRent:DC	
:AVERage	
:ADVanced	
[:STATe]?	Query state of advanced filter.
[:STATe] \<b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:METHod \<name>	Select measurement technique: NORMal, ICIRcuit.
:METHod?	Query method.
:VOLTage:AC	Path to configure AC voltage.
:APERture \<n>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles \<n>	Specify integration rate (number of line cycles; 0.01 to 10).
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.
:COUPling AC|DC	Specify input coupling.
:COUPling?	Query input coupling.
:RANGe	Path to configure measurement range:
[:UPPer] \<n>	Select range (0 to +775).
[:UPPer]?	Query range.

71

Table 29. Sense command summary (cont.)

Command	Description
:VOLTage:AC	
:RANGe	
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto range.
:AUTO ONCE	Set range based on present input signal.
:ULIMit <n>	Specify upper limit for auto range (0 to +775).
:ULIMit?	Query upper limit.
:LLIMit <n>	Specify lower limit for auto range (0 to +775).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence <n>	Specify reference (REL) value (-775 to +775).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 to 8).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).
:NTOLerance?	Query noise tolerance level.

72

Table 29. Sense command summary (cont.)

Command	Description
:VOLTage:AC	
:AVERage	
:ADVanced	
[:STATe] \<b\>	Enable (1 or ON) or disable (0 or OFF) advanced filter.
[:STATe]?	Query state of advanced filter.
[:STATe] \<b\>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:DETector	Path to select function:
[:FUNCtion] \<name\>	Select type of AC measurement: RMS, AVERage, PEAK, LFRMs, NPeak, PPeak.
[:FUNCtion]?	Query detector function.
:PWINdow \<n\>	Specify window in seconds (0.1 to 9.9).
:PWINdow?	Query peak spike detection window.
:VOLTage:DC	Path to configure DC voltage:
:APERture \<n\>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles \<n\>	Specify integration rate (number of line cycles; (0.01 to 10).
:AUTO \<b\>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.

73

Table 29. Sense command summary (cont.)

Command	Description
:VOLTage:DC	
:NPLCycles *<n>*	
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.
:RANGe	Path to configure measurement range:
[:UPPer] *<n>*	Select range (0 to 1100).
[:UPPer]?	Query range.
:AUTO *<b>*	Enable (1 or ON) or disable (0 or OFF) auto range.
:AUTO ONCE	Set range based on present input signal.
:ULIMit *<n>*	Specify upper limit for auto range (0 to 1100).
:ULIMit?	Query upper limit.
:LLIMit *<n>*	Specify lower limit for auto range (0 to 1100).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence *<n>*	Specify reference (REL) value (-1100 to +1100).
:STATe *<b>*	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits *<n>*	Specify measurement resolution (4 to 8).
:AUTO *<b>*	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol *<name>*	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt *<n>*	Specify filter count (1 to 100).
:COUNt?	Query filter count.

74

Table 29. Sense command summary (cont.)

Command	Description
:VOLTage:DC	
:AVERage	
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).
:NTOLerance?	Query noise tolerance level.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) advanced filter.
[:STATe]?	Query state of advanced filter.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:RESistance	Path to configure resistance:
:APERture <n>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles <n>	Specify integration rate in number of line cycles (0.01 to 10).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.
:RANGe	Path to configure measurement range:

Table 29. Sense command summary (cont.)

Command	Description
:RESIstance	
:RANGe	
[:UPPer] <n>	Select range (0 to 1.05e9).
[:UPPer]?	Query range.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto range.
:AUTO ONCE	Set range based on present input signal.
:ULIMit <n>	Specify upper limit for auto range (0 to 1.05e9).
:ULIMit?	Query upper limit.
:LLIMit <n>	Specify lower limit for auto range (0 to 1.05e9).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence <n>	Specify reference (REL) value (-1.05e9 to +1.05e9).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 to 8).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).

76

Table 29. Sense command summary (cont.)

Command	Description
:RESistance	
:AVERage	
:ADVanced	
:NTOLerance?	Query noise tolerance level.
[:STATe] \<b>	Enable (1 or ON) or disable (0 or OFF) advanced filter.
[:STATe]?	Query state of advanced filter.
[:STATe] \<b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:OCOMpensated \<b>	Enable (1 or ON) or disable (0 or OFF) Offset Compensation.
:OCOMpensated?	Query Offset Compensation.
:FRESistance	Path to configure four-wire resistance:
:APERture \<n>	Specify integration rate in seconds (166.67e-6 to 200e-3).
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto aperture.
:AUTO ONCE	Enable and then disable auto aperture.
:AUTO?	Query auto aperture (0 or 1).
:APERture?	Query aperture (integration rate).
:NPLCycles \<n>	Specify integration rate in number of line cycles (0.01 to 10).
:AUTO \<b>	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
:AUTO ONCE	Enable and then disable auto NPLC.
:AUTO?	Query auto line cycle integration (0 or 1).
:NPLCycles?	Query line cycle integration rate.

77

Table 29. Sense command summary (cont.)

Command	Description
:FRESistance	
:RANGe	Path to configure measurement range:
[:UPPer] <n>	Select range (0 to 2.1e5).
[:UPPer]?	Query range.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto range.
:AUTO ONCE	Set range based on present input signal.
:ULIMit <n>	Specify upper limit for auto range (0 to 2.1e5).
:ULIMit?	Query upper limit.
:LLIMit <n>	Specify lower limit for auto range (0 to 2.1e5).
:LLIMit?	Query lower limit.
:AUTO?	Query auto range.
:REFerence <n>	Specify reference (REL) value (-2.1e5 to +2.1e5).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 to 8).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
:ADVanced	Path to configure and control advanced filter.
:NTOLerance <n>	Specify noise tolerance level (0 to 100 percent).

78

Table 29. Sense command summary (cont.)

Command	Description
:FRESistance	
:AVERage	
:ADVanced	
:NTOLerance?	Query noise tolerance level.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) advanced filter.
[:STATe]?	Query state of advanced filter.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:OCOMpensated <b>	Enable (1 or ON) or disable (0 or OFF) Offset Compensation.
:OCOMpensated?	Query Offset Compensation.
:FREQuency	Path to configure frequency:
:COUPling AC|DC	Specify input coupling.
:COUPling?	Query input coupling.
:REFerence <n>	Specify reference (REL) value (0 to 15e6).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) REL.
:STATe?	Query state of REL (0 or 1).
:ACQuire	Use input signal as reference.
:REFerence?	Query reference (REL) value.
:DIGits <n>	Specify measurement resolution (4 or 5).
:DIGits?	Query resolution.
:SOURce <name>	Select source: CURRent, VOLTage.
:SOURce?	Query source.
:THReshold	Path to configure threshold:
:CURRent	Path to set current threshold:
:RANGe <n>	Specify range (0 to 1).
:RANGe?	Query range.

79

Table 29. Sense command summary (cont.)

Command	Description

:FREQuency
  :THReshold
    :CURRent
      :LEVel \<n>
      :LEVel?
    :VOLTage
 	
      :RANGe \<n>
      :RANGe?
      :LEVel \<n>
      :LEVel?
      :TTL
	
	Specify threshold level.
	Query threshold level.
	Path to set voltage threshold:
	Specify range (0 to 1000).
	Query range.
	Specify threshold level.
	Query threshold level.
	Set threshold to TTL level.

:TEMPerature
 	
  :APERture \<n>

    :AUTO \<b>
 	
    :AUTO ONCE
 	
    :AUTO?
 	
  :NPLCycles?
 	
  :REFerence \<n>
    :STATe \<b>
 	
    :STATe?
    :ACQuire
 	
  :REFerence?
	Path to configure four-wire resistance:
	Specify integration rate in seconds (166.67e-6 to 200e-3).
	Enable (1 or ON) or disable (0 or OFF) auto aperture.
	Enable and then disable auto aperture.
	Query auto aperture (0 or 1).
	Query aperture (integration rate).
	Specify integration rate in number of line cycles (0.01 to 10).
	Enable (1 or ON) or disable (0 or OFF) auto NPLC.
	Enable and then disable auto NPLC.
	Query auto line cycle integration (0 or 1).
	Query line cycle integration rate.
	Specify reference (REL) value.
	Enable (1 or ON) or disable (0 or OFF) REL.
	Query state of REL (0 or 1).
	Use input signal as reference.
	Query reference (REL) value.

80

Table 29. Sense command summary (cont.)

Command	Description
:TEMPerature	
:DIGits <n>	Specify measurement resolution (4 to 7).
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto resolution.
:AUTO ONCE	Enable and then disable auto resolution.
:AUTO?	Query auto resolution (0 or 1).
:DIGits?	Query resolution.
:AVERage	Path to configure and control the filter.
:TCONtrol <name>	Select filter type: MOVing, REPeat.
:TCONtrol?	Query filter type.
:COUNt <n>	Specify filter count (1 to 100).
:COUNt?	Query filter count.
[:STATe] <b>	Enable (1 or ON) or disable (0 or OFF) filter.
[:STATe]?	Query state of digital filter.
:AUTO <b>	Enable (1 or ON) or disable (0 or OFF) auto filter.
:AUTO ONCE	Enable and then disable auto filter.
:AUTO?	Query auto filter.
:TRANsducer <name>	Select transducer: RTD, FRTD, TCouple.
:TRANsducer?	Query transducer.
:RTD	Path to configure RTD measurements:
:TYPE <name>	Select RTD parameters: PT385, PT3916, USER.
:TYPE?	Query RTD type.
:ALPHa <NRf>	Specify constant for USER type (0 to 0.01).
:ALPHa?	Query alpha.
:BETA <NRf>	Specify constant for USER type (0 to 1).
:BETA?	Query beta.
:DELTa <NRf>	Specify constant for USER type (0 to 5).
:DELTa?	Query delta.
:RZERo <NRf>	Specify constant for USER type (0 to 1000).
:RZERo?	Query rzero.

81

Table 29. Sense command summary (cont.)

Command	Description
:TEMPerature	
:TCouple	Path to configure TC measurements:
:TYPE <name>	Select thermocouple type: J, T, K, E, R, S, B.
:TYPE?	Query TC type.
:RJUNctionX	Path to configure reference junctions (Z = 1 to 5).
:RSELect <name>	Select reference type: SIMulated, REAL.
:RSELect?	Query reference type.
:SIMulated <n>	Specify simulated remperature.
:SIMulated?	Query simluated temperature.
:REAL	Command path to specify "real" reference junction.
:TCOefficient <n>	Specify TC.
:TCOefficient?	Query TC.
:OFFSet <n>	Specify voltage offset at 0°C.
:OFFSet?	Query voltage offset.
:ACQuire	Update reference temperature.
:SENSe2	
:TTL[1]	Path to read digital input port:
:DATA?	Query (read) the digital input port.

82

Table 30. SOURce command summary

Command	Description
:SOURce :TTL[1][:LEVel] \<b\>	Set digital output line #1 true (1 or ON) or false (0 or OFF).
:TTL[1][:LEVel]?	Query digital output line 1.
:TTL2[:LEVel] \<b\>	Set digital output line #2 true (1 or ON) or false (0 or OFF).
:TTL2[:LEVel]?	Query digital output line 2.
:TTL3[:LEVel] \<b\>	Set digital output line #3 true (1 or ON) or false (0 or OFF).
:TTL3[:LEVel]?	Query digital output line 3.
:TTL4[:LEVel] \<b\>	Set digital output line #4 true (1 or ON) or false (0 or OFF).
:TTL4[:LEVel]?	Query digital output line 4.

Table 31. STATus command summary

Commands	Description
:STATus	
:MEASurement	Path to control measurement event registers:
[:EVENt]?	Read the event register.
:ENABle \<NRf\>	Program the enable register.
:ENABle?	Read the enable register.
:PTRansition \<NRf\>	Program the positive transition register.
:PTRansition?	Read the positive transition register.
:NTRansition \<NRf\>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:OPERation	Path to control operation event registers:
[:EVENt]?	Read the event register.
:ENABle \<NRf\>	Program the enable register.
:ENABle?	Read the enable register.
:PTRansition \<NRf\>	Program the positive transition register.
:PTRansition?	Read the positive transition register.

83

Table 31. STATus command summary (cont.)

Commands	Description
:STATus	
:OPERation	
:NTRansition <NRf>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:ARM	Path to control arm event registers:
[:EVENt]?	Read the event register.
:ENABle <NRf>	Program the enable register.
:ENABle?	Read the enable register.
:PTRansition <NRf>	Program the positive transition register.
:PTRansition?	Read the positive transition register.
:NTRansition <NRf>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:SEQuence	Path to control the sequence event registers:
[:EVENt]?	Read the event register.
:ENABle <NRf>	Program the enable register.
:ENABle?	Read the enable register.
:PTRansition <NRf>	Program the positive transition register.
:PTRansition?	Read the positive transition register.
:NTRansition <NRf>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:TRIGger	Path to control trigger event registers:
[:EVENt]?	Read the event register.
:ENABle <NRf>	Program the enable register.

Table 31. STATus command summary (cont.)

Commands	Description
:STATus	
:OPERation	
:TRIGger	
:ENABle?	Read the enable register.
:PTRansition <NRf>	Program the positive transition register.
:PTRansition?	Read the positive transition register.
:NTRansition <NRf>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:QUEStionable	Path to control questionable event registers:
[:EVENt]?	Read the event register.
:ENABle <NRf>	Program the enable register.
:ENABle?	Read the enable register.
:PTRansition <NRf>	Program the positive transition register.
:PTRansition?	Read the positive transition register.
:NTRansition <NRf>	Program the negative transition register.
:NTRansition?	Read the negative transition register.
:CONDition?	Read the condition register.
:PRESet	Return status registers to default states.
:QUEue	Path to access error queue:
[:NEXT]?	Read the most recent error message.
:ENABle <list>	Specify error and status messages for queue.
:ENABle?	Read the enabled messages.
:DISable <list>	Specify messages not to be placed in queue.
:DISable?	Read the disabled messages.
:CLEar	Clears all messages from Error Queue.

Table 32. SYSTem command summary

Command	Description
:SYSTem	
:PRESet	Return to :SYST:PRES defaults.
:POSetup <name>	Select power-on setup: RST, PRE-Set, SAV0-SAV9.
:POSetup?	Query power-on setup.
:FRSWitch?	Query INPUTS switch (0 = rear, 1 = front).
:VERSion?	Query revision level of SCPI standard.
:ERRor?	Query (read) Error Queue.
:AZERo	Path to set up auto-zero.
:TYPE <name>	Select auto-zero mode: NORMal, SYNChronous.
:TYPE?	Query auto-zero mode (0 or 1).
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) auto-zero.
:STATe?	Query auto-zero (0 or 1).
:AMEThod <name>	Select reading acquisition method: BURSt, NORMal, ASTReam, SSTReam.
:AMEThod?	Query acquisition method.
:LSYNc	Path to control line synchronization of measurements.
:STATe <b>	Enable (1 or ON) or disable (0 or OFF) line sync.
:STATe?	Query line sync (0 or 1).
:KEY <NRf>	Simulate key-press (1 to 31).
:KEY?	Query the last "pressed" key.
:CLEar	Clears messages from the Error Queue.
:FETCh	Path to set fetch format.
:FORMat <name>	Select format for :FETCh? command; SCPI or FRESh.

86

Table 33. TRACe command summary

Command	Description
:TRACe|:DATA	Use :TRACe or :DATA as root command.
:CLEar [BUFFER,]	Clear readings from buffer.
:FREE? [BUFFER,]	Query bytes available and bytes in use.
:EGRoup [BUFFER,] <name>	Select element group: FULL, COMPact.
:EGRoup? [BUFFER,]	Query element group.
:POINts [BUFFER,] <n>	Specify size of buffer.
:AUTO [BUFFER,] <b>	Enable (1 or ON) or disable auto buffer sizing.
:AUTO? [BUFFER,]	Query state of auto buffer sizing.
:POINts? [BUFFER,]	Query buffer size.
:FEED [BUFFER,] <name>	Select source of readings: SENSe[1], CALCulate[1], NONE.
:PRETrigger	Path to configure pre-trigger storage mode.
:AMOunt	Path to specify number of pre-trigger readings.
[:PERCent] [BUFFER,] <n>	Specify as a % (0 to 100) of buffer.
[:PERCent]? [BUFFER,]	Query percentage.
:READings [BUFFER,] <n>	Specify as a number.
:READings? [BUFFER,]	Query number of readings.
:SOURce [BUFFER,] <name>	Select pre-trigger source event:EXTernal, TLINk, BUS, MANual.
:SOURce? [BUFFER,]	Query pre-trigger source event.
:CONTrol [BUFFER,] <name>	Select buffer control mode:NEVer, NEXT, ALWays, PRETrigger.
:CONTrol? [BUFFER,]	Query buffer control mode.
:FEED? [BUFFER,]	Query source of readings for buffer.
:DATA? [BUFFER,]	Read all readings in the buffer.

Table 34. Trigger command summary

Command	Description
:INITiate	Subsystem command path:
[:IMMediate]	Initiate one trigger cycle.
:CONTinuous <b>	Enable (1 or ON) or disable (0 or OFF) continuous initiation of trigger system.
:CONTinuous?	Query continuous initiation.
:ABORt	Reset trigger system.
:ARM[:SEQuence[1]]	Subsystem command path to configure arm layers:
[:LAYer[1]]	Path to program arm layer 1:
:IMMediate	Loop around control source.
:COUNt <n>	Program arm count (1 to 99999, or INF).
:COUNt?	Query arm count.
:SOURce <name>	Select control source: HOLD, IMMediate, MANual, BUS, TLINk, EXTernal.
:SOURce?	Query control source.
:SIGNal	Loop around control source.
:TCONfigure	Path to configure Triggers:
:DIRection <name>	Enable (SOUR) or disable (ACC) Bypass: SOURce, ACCeptor.
:DIRection?	Query direction.
:ASYNchronous	Path to configure asynchronous Trigger Link:
:ILINe <NRf>	Select input line (1 to 6).
:ILINe?	Query input line.
:OLINe <NRf>	Select output line (1 to 6).
:OLINe?	Query output line.
:LAYer2	Path to program arm layer 2:
:IMMediate	Loop around control source.
:COUNt <n>	Program scan count (1 to 99999 or INF).
:COUNt?	Query scan count.
:DELay <n>	Program delay (0 to 999999.999 sec).
:DELay?	Query delay.
:SOURce <name>	Select control source: HOLD, IMMediate, TIMer, MANual, BUS, TLINk, EXTernal.
:SOURce?	Query control source.
:TIMer <n>	Set timer interval (0 to 999999.999 sec).
:TIMer?	Query timer.
:SIGNal	Loop around control source.

Table 34. Trigger command summary (cont.)

Command	Description
:ARM[:SEQuence[1]]	
:LAYer2	
:TCONfigure	Path to configure Triggers:
:DIRection <name>	Enable (SOUR) or disable (ACC) Bypass: SOURce, ACCeptor.
:DIRection?	Query direction.
:ASYNchronous	Path to configure asynchronous Trigger Link:
:ILINe <NRf>	Select input line (1 to 6).
:ILINe?	Query input line.
:OLINe <NRf>	Select output line (1 to 6).
:OLINe?	Query output line.
:TRIGger[:SEQuence[1]]	Path to program trigger layer:
:IMMediate	Loop around control source.
:COUNt <n>	Program measure count (1 to 99999, or INF).
:COUNt?	Query measure count.
:DELay <n>	Program delay (0 to 999999.999 sec).
:DELay?	Query delay.
:SOURce <name>	Select control source: HOLD, IMMediate, TIMer, MANual, BUS, TLINk, EXTernal.
:SOURce?	Query control source.
:TIMer <n>	Set timer interval (0 to 999999.999 sec).
:TIMer?	Request the programmed timer interval.
:SIGNal	Loop around control source.
:TCONfigure	Path to configure Triggers:
:PROTocol <name>	Select protocol: ASYNchronous, SSYNchronous.
:PROTocol?	Query protocol.
:DIRection <name>	Enable (SOUR) or disable (ACC) Bypass: SOURce, ACCeptor.
:DIRection?	Query direction.
:ASYNchronous	Path to configure asynchronous Trigger Link:
:ILINe <NRf>	Select input line (1 to 6).
:ILINe?	Query input line.
:OLINe <NRf>	Select output line (1 to 6).
:OLINe?	Query output line.
