- ■ **Equipment maintenance module**

- ■ **Organiser manages future appointments**

- ■ **Client manager to organise your customers**

- ■ **Full database and reporting facilities**

DESCRIPTION

PowerSuite Professional is designed for the management of test results from electrical testing and PAT testing, including client management and asset maintenance.

All packages from the Contractor pack provide a data based client, assets and results management package that provides the ideal solution to managing, electrical and portable appliance test results.

All PowerSuite Professional packages from Contractor onwards are fully data based, ensuring all records and downloaded data is allocated to the appropriate customer on which a number of reports can be run.

Each level of PowerSuite Professional offers additional modules and functionality, providing the ideal entry point for the widest range of customer requirement. Clients, locations and assets, including all electrical test results, can be moved freely within PowerSuite Professional.

Data can be downloaded from Megger test equipment or 3rd party test instruments (Industrial pack upwards). You can also transfer test results in real-time into your certificates using the Megger MFT1553/MFT1730 via Bluetooth. The data is then assigned to the relevant client record. Alternatively, results can be imported directly into a certificate, which automatically extracts the client and location data into the certificate header.

Advantages of all PowerSuite Professional packages include:

- ■ Working in real form layout not spreadsheets.

- ■ High quality results.

- ■ Printed certificates are easy to read with no ambiguous writing or mistakes.

- ■ Wizard driven operations, toolbars and dropdown menus.

- ■ Greater flexibility and productivity.

- ■ Client and location manager.

- ■ Keeps your customer details and locations for simple importing to certificates.

- ■ Download test results or direct data entry to certificates.

- ■ Import data from a test instrument or use as a form filler.

- ■ Real-time test result transfer with Megger MFT1553/ MFT1730 via Bluetooth.

- ■ Simplified download data management.

- ■ With a built-in Download Manager window, downloads can be saved until ready to import to the required certificate. All download files are date and time stamped to prevent overwriting.

- ■ Easy certificate generation.

- ■ Simply click the Certificate Wizard to create completed or blank certificates.

- ■ Custom certification.

- ■ Personalise the look of your certificates and reports using your company logo.

- ■ Visibility of clients, download files, assets and results without the need to switch software modules.

- ■ Data is held in separate windows and can be moved as required.

Furthermore, each package offers a progressive level of functionality, with additional features and functions, concluding with the PowerSuite Professional Power package.

Individual package details include:

Contractor

- Download Manager – for Megger download support. A wide range of drivers are available for Megger electrical test and PAT testing instrumentation.

- Certificate Manager – Extensive certificates including ECA, IEE, NICEIC, ELECSA and BS Electrical test certificates. A full range of PAT testing certificates including repairs cerificates.

- A whole section of certificates and reports dedicated to project billing.

- Reports module – A wide range of reports can be generated for Electrical Installation testing and PAT testing.

- Contacts Manager – Simple graphical view of all your clients, locations and contact details.

- Database – Client and results database manage links to all your customers with their test results.

- Front page – Automatically appends a header page to your reports, from a choice of four different styles.

- Organiser module – For scheduling workload, site work and retesting etc. The graphical diary will display historical, forthcoming events and appointments.

- Digital Imaging module – Allowing the addition of digital photos into your documentation, increasing clarity in reposts whilst reducing the amount of explanations needed to describe a problem.

- Third party instrument download drivers are included for other manufacturers Portable Appliance Testers and Electrical Installation testers. This allows the download of test results on existing non-Megger instruments.

- Extended forms offer alternative and extra certificate formats including filling stations and security systems, ensuring there is a certificate to meet your requirements.

Contractor On-Site

Contractor On-Site has all the features of the Contractor package with the addition of a single Ultra Mobile licence (see Ultra Mobile information sheet).

Power

Includes the full Industrial modules and features.

- Document designer module – for creating your own customised certificates and reports for printing on plain paper. Edit an existing document or create a new one. Documents can be personalised and fonts changed.

- Maintenance Module – An essential tool for managing the multitude of equipment that is not covered by Periodic Electrical testing. Such items include ladder, fire extinguishers and saws etc. These items are fully integrated into the PowerSuite Professional database and retesting can be managed through the organiser module.

Additional assets can be added as necessary and the test parameters defined. Customer certificates can be created from the document designer.

- View CD - View and print electronic copies of certificates or reports without the need to install PowerSuite Professional.
