Space Requirements

To mount the instrument into the cabinet correctly, please ensure that the following requirements are met.

- The cabinet must be a standard 19-inch one.
- The available height of the cabinet should be at least 6U (266.7 mm).
- The depth of the cabinet should be at least 400 mm.

The dimensions of the rack are as shown below.

Unit: mm

Installation Procedures

CAUTION
Only authorized operators are allowed to perform the installation. Improper installation might cause damage to the instrument or an installation failure.

1. Install the left plate: Attach the left plate to the left edge of the front plate, then fasten them with two M4 screws.

2. Place the instrument: Place the instrument into the frame set up by the front plate and the left plate.

3. Install the right plate: Attach the right plate to the right edge of the front plate, then fasten them with two M4 screws.

4. Get encased in the cabinet: Mount the assembled instrument and rack into a standard 19-inch cabinet by using six M6 screws and six M6 square nuts.
