The Sorensen XT Series provides 60 watts of programmable linear DC power in a quarter-rack package suited for both benchtop and system applications. XT Series power supplies are ideal for OEM applications where a wide adjustment of output voltage or current is required in a compact package. For systems applications, multiple single units can be rack mounted in configurations of up to four independent 60-watt outputs.

Specifications subject to change without notice.

- Specifications indicate typical performance at 25° C ± 5°C, nominal line input of 115 Vac.
- For input voltage variation over the AC input voltage range, with constant rated load.
- For 0-100% load variation, with constant nominal line voltage.
- Maximum drift over 8 hours with constant line, load, and temperature, after 30-minute warm-up.
- Change in output per °C change in ambient temperature, with constant line and load.
- Apply accuracy specifications according to the following voltage program accuracy example: Set a model 15-4 power supply to 10 V. The expected result will be within the range of 10 V ± 20 mV ± 0.1% of the set voltage of 10 V.
