DLM 2000 Series

Mixed Signal Oscilloscope

Lineup includes 200 MHz, 350 MHz, 500 MHz bandwidth models

Lightweight and compact

Large 8.4-inch LCD display

Long memory: Up to 125M points (with /M2 option)

High speed sampling: Up to 2.5 GS/s (1.25 GS/s with 4 ch)

Flexible inputs and flexible performance

Easy-to-Use & Easy-to-See

Easy to use. Portrait body + large screen makes display easy to see.

We elevated the large (8.4-inch) LCD screen up into the line of sight. Also, the portrait format saves space on the desk or test bench. A compact personal oscilloscope designed for easy viewing and ease of use.

Measured values can be accurately read on the 0.1 div sub grid display.

Signal observation on 4 channels or more...

Flexible MSO Input - Capture a mixed signals of analog and logic signals -

Four channels is not sufficient to view the functioning of digital control circuits. The DLM2000 series converts 4 ch of analog input to 8-bit logic, and functions as a 3 ch analog + 8-bit logic MSO (mixed signal oscilloscope).

3 ch analog + 8-bit logic

The performance of up to 11 inputs by converting to logic

Using logic input, up to 11 input signals can be observed simultaneously as 3 ch of analog and 8-bit logic. It is not only possible to use logic input for observation of data and control signals, or as a trigger source, but also for logic input analysis of I²C and SPI serial busses.

Fast data processing with ScopeCORE

With our proprietary ScopeCORE fast data processing IC, real time display is possible even when simultaneously measuring multichannel signals of 11 inputs.

Sophisticated waveform acquisition engine

With long memory and the History function, you'll never miss an historical waveform. A variety of trigger functions reliably capture the waveforms you want.

▶ Large capacity (125 Mpoint) memory enables long-duration measurements

For taking 2 ch measurements in Single mode, you can add the /M2 memory expansion option giving you up to 125 Mpoints of large memory capacity. 10,000 Hz signals can be recorded for up to 5,000 seconds. Even at a sampling rate of 1.25 GS/s, waveforms down to 0.1 seconds can be captured.

	Continuous Measurement	Single-Shot Measurement	
	2 ch, 4 ch same	With 4 ch (With 2ch for DLM20x2)	With 2 ch (With 1ch for DLM20x2)
Standard	1.25 Mpoints	6.25 Mpoints	12.5 Mpoints
/M1, /M1S memory option	6.25 Mpoints	25 Mpoints	62.5 Mpoints
/M2 memory option	12.5 Mpoints	62.5 Mpoints	125 Mpoints

Note)The /M1, /M2 memory expansion options are only available on 4ch models.
The /M1S option is only available on 2ch models.

▶ You can replay waveforms later on, so you'll never miss an abnormal waveform - History Function -

With the DLM2000 series, up to 20,000 previously captured waveforms can be saved in the acquisition memory. With the History function, you can display just one or all of the previously captured waveforms (history waveforms) on screen. You can also perform cursor measurement, computation, and other operations on history waveforms. Using the History function, you can analyze rarely-occurring abnormal signals.

History search function

You can search the up to 20,000 previously captured waveforms for history waveforms that meet certain conditions. You can perform cursor measurement and other analyses on the found waveforms.

Replay function

Waveforms can be displayed in order, one at a time, by using the rotary knob. With the Replay function, history waveforms can be automatically played back, paused, fast-forwarded, and rewound.

▶ Trigger Function capturing combined analog/digital complex waveforms

The DLM2000 series comes with a variety of easy-to-configure triggers combining analog and logic inputs such as edge, enhanced, and B triggers.

Trigger function example

◆ A to B(n) trigger:

Example: Trigger on the 7th edge of signal on B. This is effective for measurements with shifted timing, such as non-standard video signal vertical/horizontal periods or motor reference position pulses and drive pulses.

◆ Serial pattern trigger (user defined):

Example : Trigger on an arbitrarily set pattern of up to 128 bits. This is effective for detecting ID/Data and other portions of proprietary communication formats.

◆ Dual pulse trigger:

Example: Trigger on a combination of CAN and LIN bus triggers, I2C + SPI bus triggers, and other combinations are possible.

▶ Real time filter with optimum noise reduction supports a wide range of frequencies (from 8 kHz to 200 MHz)

The DLM2000 series has two types of filters, one processed at the input circuit and one based on MATH functions. These filters are effective for rejecting unwanted signals, allowing observation of only the desired bandwidths.

Real time filters

Each channel has 14 low pass filters available from 8 kHz to 200 MHz. Waveforms of limited bandwidths are stored in internal memory.

Cutoff frequencies : 200 MHz, 100 MHz, 20 MHz, 10 MHz, 5 MHz, 2 MHz, 1 MHz, 500 kHz, 250 kHz, 125 kHz, 62.5 kHz, 32 kHz, 16 kHz, and 8 kHz

Processing with built-in filters

Computed digital filters

The input waveform can be filtered using an IIR filter, which is a MATH function. Filtered waveforms can be displayed at the same time as the input waveform for comparison. You can select low pass or high pass filters.

Cutoff frequency setting range : 0.01 Hz to 500 MHz

▶ Zooms into two different points — Waveform zoom and search functions —

Zoom two locations simultaneously

Because the DLM2000 series lets you set zoom factors independently, you can display two zoomed waveforms with different time axis scales at the same time. Also, using the Auto Scroll function, you can automatically scroll waveforms captured in long memory and change the zoomed location. With Auto Scroll you can choose forward, backward, fast-forward, scroll speed, and other control options.

Large capacity memory gives you a variety of waveform search functions.

Two types of waveform searching:

Normally, searching for data takes time and costs money, and long memory is useless without functions for extracting desired data from a large capacity memory. That's why the DLM2000 series does not simply offer long memory, it also provides powerful waveform search functions.

Searching for data in a single screen: the Zoom Search function

This function searches captured waveforms in the long memory and displays waveforms that meet the search criteria in the zoom area. The locations of the found waveforms are marked on screen (▼ shows the current location).

- **Waveform search criteria**
Edge, edge (with conditions), state pattern, pulse width, state width, serial bus (only on models with the serial bus analysis option)

Waveform search using edge criterion

Searching for history waveforms: the History Search function

Criteria can be specified for extracting desired waveforms from up to 20,000 previously captured waveforms.

Searching for waveforms in zones created by moving measured waveforms up/down/left/right.

Search for waveforms that pass through/do not pass through a rectangular zone placed on screen.

▶ Displays trends of peak-to-peak or pulse width per cycle

— Measure function and statistics —

Twenty-eight waveform parameters are included such as: maximum, minimum, peak-to-peak, pulse width, period, frequency, rise/fall time, and duty ratio.

Automated measurement can be performed using up to 20 of these waveform parameters. Also, waveform parameters can be measured repeatedly, and the statistical values displayed (mean, maximum, minimum, standard deviation, etc.).

— Trend and histogram displays —

Waveform parameters such as period, pulse width, and amplitude can be measured repeatedly and displayed in graphs. In a single screen you can observe period-by-period fluctuations, compute amplitudes every screen using multiple waveforms, and display amplitudes as trends. You can also display histograms referencing the voltage or time axis using values from repeated automated measurement of waveform parameters.

Trend display of waveform parameters
Histogram display using the time axis

▶ Measures voltage/time differences automatically

— Cursor Measurement —

Cursors can be placed on the displayed waveform from signal data, and various measurement values at the intersection of the cursor and waveform can be displayed. There are six types of cursor; ΔT , ΔV , $\Delta T \& \Delta V$, Marker, Degree Cursor.

Simultaneous level and time difference measurement with the $\Delta T \& \Delta V$ cursor

▶ Analyzes frequency spectrums

— FFT analysis —

Up to 2 FFT analyses can be performed simultaneously. FFT can be performed on computed waveforms in addition to the actual waveforms on CH1 to CH4. Analysis can be performed of the frequency components of waveforms filtered for limited bandwidth, of frequency for changes in period of rotary objects, and other phenomena.

FFT analysis

▶ Keeps waveforms with one push

— Snapshot —

By pressing the SNAPSHOT key to the lower right of the screen, you can freeze a white trace of the currently displayed waveform on the screen. You can press the key repeatedly and conveniently leave traces for comparing multiple waveforms. Also, snapshot data recorded on screen can be saved or loaded as files, and can be recalled for use as reference waveforms when making comparisons.

Using snapshots (white waveforms)

▶ Displays stored files in thumbnail format

— Thumbnails of saved files —

Thumbnails of waveform data, waveform image data, and Wave-Zone files can be displayed. The image and file names are shown so that you can view screen image contents while copying or deleting files. In addition to normal-sized screens, you can even save wide images that have been zoomed along the time axis.

Thumbnails of saved files

Zoomed (2x) long image file

▶ Has a GO/NO-GO function

— Action on trigger —

GO/NO-GO can be determined using trigger conditions, zone waveforms, measurement parameters, and other criteria. For NO-GO, actions can be carried out at the same time such as sounding a buzzer, saving the current waveform, or sending notification to a designated e-mail address. Waveforms in which an abnormality occurred can be saved for confirmation and analysis of the phenomena at a later time.

Abnormal waveform detected

▶ Can check functions with graphical online help

— Graphical online help —

You can view detailed graphical explanations of the oscilloscope's functions by pressing the "?" key in the lower left of the screen. This lets you get help on functions and operations on screen without having to consult the user's manual.

Serial analysis function options (/F1, /F2, /F3, /F4) - UART/CAN/LIN/I²C/SPI-

Triggers for UART, CAN, LIN, I²C, and SPI bus signals are supported along with decode display analysis (serial bus analysis option only on 4 ch models). Logic input can also be used for serial buses (excluding CAN and LIN).

Simultaneous analyses of different busses: Two busses can be analyzed simultaneously. Waveforms and analysis results from busses with different speeds can be displayed in individual Zoom screens with different scales.

A wealth of trigger functions: A wide variety of trigger conditions can be set, such as ID/Data trigger combinations and combinations of serial bus triggers with normal edge triggers.

Maximum differential input voltage range: ± 25 V

Differential probe (model 701920)
DC to 500 MHz bandwidth
100 kΩ, approximately 2.5 pF
Maximum differential input voltage range: ±12V

Power supply analysis option (/G4)

Dedicated power supply analysis options are available (4 ch models only) for switching loss, joule integral (i2t), SOA (safe operating area) analysis, harmonic analysis of power supply current based on EN61000-3-2, and other operations.

Switching loss analysis

Voltage and current waveforms can be input to the 62.5 MW (max.) long memory (/M2 models) for computation of switching loss (V(t) X i(t)). A wide variety of switching loss analyses are supported, including turn-on/off loss calculation, loss including continuity loss, and loss over long cycles (50 Hz/60 Hz).

Harmonic analysis of power supply current based on EN61000-3-2

Harmonics determined by the IEC standard that are generated by the target device can be judged for each applicable class (classes A-D). Bar graphs and lists can be displayed for comparing harmonic current limit values with values calculated from actually measured signals.

Ethernet (optional)

Supports 1000BASE-T, 100BASE-TX,
10BASE-T

GO/NO-GO I/O terminal

Using the GO/NO-GO function, you can input a timing signal for judging a waveform and output the result as a TTL level signal.

RGB video signal output terminal

You can output an image signal and check the waveform on an external monitor.

USB-PC connection terminal

Enables control from a PC.

USB peripheral connection terminal

Supports USB storage, USB keyboards, USB printers.

- Probe power terminal (optional)

Power supply output terminal for current probes (701930 and 701931) and differential probes (701920, 701921, 701922, 700924, 700925, and 701926).

- GP-IB connection terminal (optional)

Enables control from a PC.

- External trigger input

Lets you input a trigger signal separately from the input signal.

- Trigger output

Outputs a CMOS 3.3V level trigger signal.

Xviewer (701992, sold separately)

Xviewer is software for use on a PC. It can be used for display, analysis, and conversion to ASCII of binary waveform data using waveforms captured by the DLM2000 series. By adding the MATH option, you can enter user expressions for performing waveform computations. FFT of up to 2 Mwords can be performed.

UART Bus Signal Analysis Functions (/F1 & /F3 Options)

Bit rate	1200 bps, 2400 bps, 4800 bps, 9600 bps, 19200 bps, user defined (an arbitrary bit rate from 1 k to 1 Mbps with resolution of 100 bps)	
Data format	Select a data format from the following 8 bit (Non Parity) / 7 bit Data + Parity / 8 bit + Parity	
UART Trigger modes	Every Data, Data, Error (Framing, Parity)	
Analyzable signals	Select CH1 to CH4, logic input, or M1 to M2	
Auto setup function	Auto setting of bit rate, threshold value, time axis scale, voltage axis scale, and display of analysis results	
Analyzable no. of frames	300,000 frames max.	
Analysis results displays	Analysis no., time from trigger position (Time(ms)), Data (Bin, Hex) display, ASCII display, and Information.	
Auxiliary analysis functions	Data search	
Analysis result save function	Analysis list data can be saved to CSV-format files	

CAN Bus Signal Analysis Functions (/F4 Option)

Applicable bus	CAN version 2.0A/B, Hi-Speed CAN (ISO11898), Low-Speed CAN (ISO11519-2)	
Bit rate	1 Mbps/500 kbps/250 kbps/125 kbps/83.3 kbps/33.3 kbps	User defined (an arbitrary bit rate from 10.0 kbps to 1.000 Mbps with resolution of 100 bps)
CAN bus Trigger modes	SOF, ID/DATA, ID OR, Error(enabled when loading physical values/symbol definitions)	
Auto setup function	Auto setting of bit rate, threshold value, time axis scale, voltage axis scale, and display of analysis results	
Analyzable no. of frames	100,000 frames max.	
Analysis results displays	Analysis no., time from trigger position (Time (ms)), Frame type, ID, DLC, Data, CRC, presence/absence of Ack, information	

Auxiliary analysis functions Analysis result save function

Data search and field jump functions Analysis list data can be saved to CSV-format files

LIN Bus Signal Analysis Functions (/F4 Option)

Applicable bus	LIN Rev. 1.3, 2.0	
Bit rate	19.2 kbps, 9.6 kbps, 4.8 kbps, 2.4 kbps, 1.2 kbps	User defined (an arbitrary bit rate from 1000 bps to 200 kbps with resolution of 100 bps)
LIN bus Trigger modes	Break Synch, ID/DATA, ID OR, and ERROR trigger	
Auto setup function	Auto setting of bit rate, threshold value, time axis scale, voltage axis scale, and display of analysis results	
Analyzable no. of frames	100,000 frames max.	
Analysis results displays	Analysis no., time from trigger position (Time (ms)), ID, ID-Field, Data, CheckSum, information	
Auxiliary analysis functions	Data search and field jump functions	
Analysis result save function	Analysis list data can be saved to CSV-format files	

GP-IB (/C1 & /C11 Options)

Electromechanical specifications	Conforms to IEEE std. 488-1978 (JIS C 1901-1987)
Protocol	Conforms to IEEE std. 488.2-1987

Auxiliary Input

Rear panel I/O signal	External trigger input(DLM20x2: front panel), external trigger output, GO-NOGO output, video output
Probe interface terminal (front panel)	4 terminals (DLM20x4)
Probe power terminal (rear panel)	2 terminals (/P2 option) 4 terminals (/P4 option)

Internal Storage (Standard model /C8 Option)

Capacity	Standard model: 100 MB /C8 option: 1.8 GB
----------	--

Built-in Printer (/B5 Option)

Built-in printer	112 mm wide, monochrome, thermal
------------------	----------------------------------

USB Peripheral Connection Terminal

Connector	USB type A connector x 2 (front panel x 1, rear panel x 1)
Electromechanical specifications	USB 2.0 compliant
Supported transfer standards	Low Speed, Full Speed, High Speed
Supported devices	USB Printer Class Ver. 1.0 compliant EPSON/HP (PCL) ink jet printers USB Mass Storage Class Ver. 1.1 compliant mass storage devices* Please contact your local Yokogawa sales office for model names of verified devices

USB-PC Connection Terminal

Connector	USB type B connector x 1
Electromechanical specifications	USB 2.0 compliant
Supported transfer standards	High Speed, Full Speed
Supported class	USBTMC-USB488 (USB Test and Measurement Class Ver. 1.0)

Ethernet (/C10 & /C11 Options)

Connector	RJ-45 connector x 1
Transmission methods	Ethernet (1000BASE-T/100BASE-TX/10BASE-T)
Supported services	Server: FTP, VXI-11 Client: SMTP, SNMP, LPR, DHCP, DNS

General Specifications

Rated supply voltage	100 to 240 VAC
Rated supply frequency	50 Hz/60 Hz
Maximum power consumption	170 VA
External dimensions	226 (W) x 293 (H) x 193 (D) mm (when printer cover is closed, excluding protrusions)
Weight	Approx.4.2kg With no options
Operating temperature range	5 °C to 40 °C

*1 Measured under standard operating conditions after a 30-minute warm-up followed by calibration.

Standard operating conditions: Ambient temperature: 23°C $\pm$ 5°C

Ambient humidity: 55 $\pm$ 10% RH

Error in supply voltage and frequency: Within 1% of rating

*2 Value in the case of repetitive phenomenon. The frequency bandwidth of a single-shot phenomenon is the smaller of the two values, DC to sampling frequency/2.5 or the frequency bandwidth of the repetitive phenomenon.

*3. When the input section is shorted, the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1:1.

*4. Acquisition rate does not vary with an increase or decrease in channels.

External Dimensions

Unit: mm

*1: Logic probes sold separately. Please order the model 701988/701989 accessory logic probes separately.

*2: Only one of these may be selected at a time.

*3: Specify this option when using current probes or other differential probes such as models 701920 or 701922.

*4: Only one of these may be selected at a time.

*5: Only one of these may be selected at a time.

*6: Only one of these may be selected at a time.

Standard Main Unit Accessories

Part Name	Quantity
Power cord (with 3-prong to 2-prong adapter)	1
*Passive probe, model 701938 (200 MHz, 1.5 m) For models 710105, 710110 ¹	Per number of channels
*Passive probe, model 701939 (500 MHz, 1.3 m) For models 710115, 710120, 710125, 710130 ¹	Per number of channels
Protective front cover	1
Soft carrying case for probes	1
Printer roll paper (for /B5 option)	1 roll
User's manuals	1 set

Accessory Models

Name	Model	Specification
Logic probe (PBL100)	701988	1 MΩ input resistance, toggle frequency of 100 MHz
Logic probe (PBL250)	701989	100 kΩ input resistance, toggle frequency of 250 MHz
Passive probe	701938	10 MΩ (10:1), 200 MHz, 1.5 m
Passive probe	701939	10 MΩ (10:1), 500 MHz, 1.3 m
FET Pprobe	700939	DC to 900 MHz bandwidth/2.5MΩ/1.8pF
Active probe (PBA1000)	701912	DC to 1 GHz bandwidth/100kΩ/0.9pF
100:1 voltage probe	701944	DC to 400 MHz, 1.2 m, 1000 Vrms
100:1 voltage probe	701945	DC to 250 MHz, 3 m, 1000 Vrms
Differential probe	701921	DC to 100 MHz bandwidth/max. ±700 V
Differential probe	701922	DC to 200 MHz bandwidth/max. ±20 V
Differential probe (PBDH1000)	701924	DC to 1 GHz bandwidth/1MΩ/max. ±25 V
Differential probe	700924	DC to 100 MHz bandwidth/max. ±1400 V
Differential probe	700925	DC to 15 MHz bandwidth/max. ±500 V
Differential probe	701920	DC to 500 MHz bandwidth/max. ±12 V
Current probe (PBC050)	701929	DC to 50 MHz bandwidth, 30 Arms
Current probe (PBC100)	701928	DC to 100 MHz bandwidth, 30 Arms
Current probe	701930	DC to 10 MHz bandwidth, 150 Arms
Current probe	701931	DC to 2 MHz bandwidth, 500 Arms
Mini clip converter	700971	For models 701938 and 701939
BNC adapter	700972	For models 701938 and 701939
PCB adapter	366945	For models 701938 and 701939, 10 per set
Solder-in adapter	366946	For models 701938 and 701939, 1 adapter, red/black cables (3 ea.)
Printer roll paper	B9988AE	Lot size is 10 rolls, 10 meters each
Xviewer	701992-SP01	For DL/WE series, standard version
	701992-GP01	For DL/WE series, with MATH functions
Probe stand	701919	Round base, 1 arm
Carrying case	701964	Also for DL1600/DL1700E series
